Monitoring of autoregulation using intracerebral microdialysis in patients with severe head injury p. 113

Improvement of brain tissue oxygen and intracranial pressure during and after surgical decompression for diffuse brain oedema and space occupying infarction p. 117

Clinic investigation and logistic analysis of risk factors of recurrent hemorrhage after operation in the earlier period of cerebral hemorrhage p. 119

Cerebral blood flow augmentation in patients with severe subarachnoid haemorrhage p. 123

Evidence for the importance of extracranial venous flow in patients with idiopathic intracranial hypertension (IIH) p. 129

Subdural intracranial pressure, cerebral perfusion pressure, and degree of cerebral swelling in supra-and infratentorial space-occupying lesions in children p. 133

The role of noninvasive monitoring of cerebral electrical impedance in stroke p. 137

The effect of subarachnoid sodium nitroprusside on the prevention of vasospasm in subarachnoid haemorrhage p. 141

Neuroimaging

Mitochondrial injury measured by proton magnetic resonance spectroscopy in severe head trauma patients p. 149

Cerebral blood flow in mean cerebral artery low density areas is not always ischemic in patients with aneurysmal subarachnoid hemorrhage - relationship with neurological outcome p. 153

Cerebral blood flow mapping in two different subtypes of intraparenchymal hemorrhagic traumatic lesions p. 159

Postoperative changes in SPECT-rCBF in hydrocephalus p. 169

Dynamic susceptibility contrast-enhanced perfusion MR imaging in late radiation-induced injury of the brain p. 173

MRI study of cerebral blood flow and CSF flow dynamics in an upright posture: the effect of posture on the intracranial compliance and pressure p. 177

Quantitative evaluation of cerebrovascular reactivity in brain tissue by a refill kinetic method of transcranial ultrasonic perfusion imaging: a comparison with doppler sonography p. 183

Relationship between total cerebral blood flow and ICP measured noninvasively with dynamic MRI technique in healthy subjects p. 191

Hydrocephalus

Clinical comparison of tympanic membrane displacement with invasive ICP measurements p. 197

Gravity valves for idiopathic normal-pressure hydrocephalus: a prospective study with 60 patients p. 201

The relationship between CSF circulation and cerebrovascular pressure-reactivity in normal pressure hydrocephalus p. 207

Evolution of intracranial pressure during the immediate postoperative period after endoscopic third ventriculostomy p. 213

Clinical research on monitoring CSFP through lumbar epidural pressure p. 219

Evaluation of three new models of hydrocephalus shunts p. 223
The enigma of underdrainage in shunting with hydrostatic valves and possible solutions p. 229
Guidelines for management of idiopathic normal pressure hydrocephalus: progress to date p. 237
Three-year outcome of shunted idiopathic NPH patients p. 241
Clinical testing of CSF circulation in hydrocephalus p. 247
Intracranial baroreflex yielding an early Cushing response in human p. 253
Does the ventricle size change after shunt operation of normal-pressure hydrocephalus? p. 257
Clinical trials
Intravenous magnesium sulfate to improve outcome after aneurysmal subarachnoid hemorrhage: interim report from a pilot study p. 263
Secondary insults and outcomes in patients with hypertensive basal ganglia hemorrhage p. 265
Balance of risk of therapeutic hypothermia p. 269
The influence of mild hypothermia on ICP, CPP and outcome in patients with primary and secondary brain injury p. 273
Contribution of raised ICP and hypotension to CPP reduction in severe brain injury: correlation to outcome p. 277
Mortality from traumatic brain injury p. 281
Brain compliance
Assessment of different data representations and averaging methods on the Spiegelberg compliance device p. 289
Assessment of the relationship between age and continuous intracranial compliance p. 293
Cerebral haemodynamic assessment in patients with thalamic haemorrhage: a pilot study with continuous compliance monitoring p. 299
Non-invasive measurement of intracranial compliance using cine MRI in normal pressure hydrocephalus p. 303
Pulse and mean intracranial pressure analysis in pediatric traumatic brain injury p. 307
Preliminary report on spiegelberg pre and post-operative monitoring of severe head-injured patients who received decompressive craniectomy p. 311
Age-dependence of cerebrospinal parameters p. 315
Biophysics
A computer model of intracranial pressure dynamics during traumatic brain injury that explicitly models fluid flows and volumes p. 321
Plateau waves: changes of cerebrovascular pressure transmission p. 327
Brain tissue biomechanics in cortical contusion injury: a finite element analysis p. 333
Modifications of spontaneous cerebral blood flow oscillations during cardiopulmonary bypass p. 337
Concept of "true ICP" in monitoring and prognostication in head trauma p. 341
Fuzzy pattern classification of hemodynamic data can be used to determine noninvasive intracranial pressure p. 345
Clinical experience with the noninvasive ICP monitoring system p. 351
Innovative non-invasive method for absolute intracranial pressure measurement without calibration p. 357
The correlation of midline shifts of human brain with large brain haematoma using a finite element approach p. 363
Clinical study of continuous non-invasive cerebrovascular autoregulation monitoring in neurosurgical ICU p. 367
Experimental aspects
Increased intracranial pressure induces a rapid systemic interleukin-10 release through activation of the sympathetic nervous system p. 373
Experimental model for investigating hyponatremia after subarachnoid hemorrhage in rats p. 377
Effects of venom defibrase on brain edema after intracerebral hemorrhage in rats p. 381
Complement inhibition attenuates brain edema and neurological deficits induced by thrombin p. 389
Reduction of neural and vascular damage by transplantation of VEGF-secreting neural stem cells after cerebral ischemia p. 393
Ischemia-induced endothelial cell dysfunction p. 399
Systemic use of argatroban reduces tumor mass, attenuates neurological deficits and prolongs survival time in rat glioma models p. 403
Spinal contribution to CSF pressure lowering effect of mannitol in cats p. 407
Cell column chromatography: a new research tool to quantify cerebral cell volume changes following chemically-induced anoxia/re-oxygenation p. 411
Ifenprodil treatment is associated with a down-regulation of brain aquaporin 4 following cardiac arrest in rats p. 415
Intracerebral hemorrhage induces edema and oxidative stress and alters N-methyl-D-aspartate receptor subunits expression p. 421
Aging enhances intracerebral hemorrhage-induced brain injury in rats p. 425
The antioxidant effect of N-acetylcysteine on experimental contusion in rats p. 429
The investigation of cerebrospinal fluid formation by ventriculo-aqueductal perfusion method in cats p. 433
Satellite symposium on neurochemical monitoring
Introduction for the neurochemical satellite symposium p. 439
Microdialysis in traumatic brain injury - methodology and pathophysiology p. 441
Brain tissue oxygenation monitoring in acute brain injury p. 447
Near infrared spectroscopy in brain injury: today's perspective p. 453
Imaging of cerebral blood flow and metabolism in brain injury in the ICU p. 459
Brain injury and proteomics/peptidomics: is it relevant? An overview p. 465
Circulating nucleic acid analysis: diagnostic applications for acute pathologies p. 471
The Lund concept: is this logical? p. 475
Author index p. 481
Index of keywords p. 483
