

Preface to the Second Edition	p. VII
Preface to the First Edition	p. IX
Source of Information	p. XI
From Abbe's principle to Azbel'-Kaner cyclotron resonance	p. 1
From B92 protocol to Burstein-Moss shift	p. 27
From cage compound to cyclotron resonance	p. 53
From D'Alembert equation to Dzyaloshinskii-Moriya interaction	p. 81
From (e,2e) reaction to Eyring equation	p. 109
From Fabry-Perot resonator to FWHM (full width at half maximum)	p. 133
From gain-guided lasers to gyromagnetic frequency	p. 159
From habit plane to hyperelastic scattering	p. 175
From ideality factor to isotropy (of matter)	p. 199
From Jahn-Teller effect to Joule's law of electric heating	p. 207
From Kane model to Kuhn-Thomas-Reiche sum rule	p. 211
From lab-on-a-chip to Lyman series	p. 225
From Mach-Zender interferometer to Murrell-Mottram potential	p. 251
From NAA (neutron activation analysis) to Nyquist-Shannon sampling theorem	p. 285
From octet rule to oxide	p. 299
From PALM (photoactivable localization microscopy) to pyrrole	p. 307
From Q-control to qubit	p. 341
From Rabi flopping to Rydberg gas	p. 363
From Saha equation to synergetics	p. 381
From Talbot's law to type II superconductors	p. 443
From ultraviolet photoelectron spectroscopy (UPS) to Urbach rule	p. 461
From vacancy to von Neumann machine	p. 465
From Waidner-Burgess standard to Wyckoff notation	p. 473
From XMCD (X-ray magnetic circular dichroism) to XRD (X-ray diffraction)	p. 483
From Yasukawa potential to Yukawa potential	p. 487
From Zeeman effect to Zundel ion	p. 489
A list and a presentation of Scientific Journals which contain the stem Nano in their title	p. 493
Abbreviations for the scientific journals which appear as sources in the text	p. 507
Main properties of intrinsic (or lightly doped) semiconductors	p. 513
