Monitoring continual range queries p. 1
The next generation messaging technology - makes web services effective p. 13
Web searching and \([\Sigma]^{[\text{2}]}\) queries p. 20
Secure information caching on the web p. 24
Multiresolution spatial databases: making web-based spatial applications faster p. 36
A query-dependent duplicate detection approach for large scale search engines p. 48
A semantic approach for web indexing p. 59
Semantic, hierarchical, online clustering of web search results p. 69
SIMON: a multi-strategy classification approach resolving ontology heterogeneity on the semantic web p. 79
Support vector machines learning for web-based adaptive and active information retrieval p. 89
Constructing user profiles for collaborative recommender system p. 100
Unloading unwanted information: from physical websites to personalized web views p. 111
iSurfer: a focused web crawler based on incremental learning from positive samples p. 122
Identifying parallel web documents by filenames p. 135
Reflective web interface agent p. 146
A finite state mobile agent computation model p. 152
Improving XML query performance using social classes p. 158
Answering XML twig queries with automata p. 170
Labeling and querying dynamic XML Trees p. 180
Scalable XSLT evaluation p. 190
Algebraic transformation and optimization for XQuery p. 201
Efficient incremental pattern mining from semi-structured dataset p. 211
Efficient query routing for XML documents retrieval in unstructured peer-to-peer networks p. 217
Generalized inclusion dependencies in XML p. 224
Graphical representation of XML schema p. 234
MTRie: a scalable filtering engine of well-structured XML message stream p. 246
Issues in cache-answerability for XML queries on the web p. 252
Towards adaptive probabilistic search in unstructured P2P systems p. 258
Cell abstract indices for content-based approximate query processing in structured peer-to-peer data systems p. 269
A distributed ranking strategy in peer-to-peer based information retrieval systems p. 279
PeerSDI: a peer-to-peer information dissemination system p. 285
PWSD: a scalable web service discovery architecture based on peer-to-peer overlay network p. 291
Efficient community management and optimization strategies of web services in peer-to-peer environments p. 301
Towards load balancing in peer-to-peer environment of web services p. 311
Research on service model of content delivery grid p. 321
Performance-driven task and data co-scheduling algorithms for data-intensive applications in grid computing  
On analysis and comparison performance of TCP in wireless network  
Web based question answering with aggregation strategy  
Web query refinement without information loss  
An efficient multidimensional data model for web usage mining  
ANNE: an efficient framework on view selection problem  
Using relational database constraints to design materialized views in data warehouses  
Collaborative filtering algorithm based on mutual information  
Clustering data streams on the two-tier structure  
An incremental updating method for support vector machines  
Spatio-temporal reasoning based spatio-temporal information management middleware  
Inter-relevant successive trees model and its implementation  
Predicting typical user preferences using entropy in content based collaborative filtering system  
UPnP home networking-based IEEE1394 digital home appliances control  
A simple client-based hybrid robust hash routing web caching system (2HRCS)  
KGTutor: a knowledge grid based intelligent tutoring system  
An incremental updating technique for discovering frequent traversal patterns  
A knowledge-based data model and query algebra for the next-generation web  
Conditional evidence theory and its application in knowledge discovery  
An efficient method for quantitative association rules to raise reliance of data  
Web usage mining: sequential pattern extraction with a very low support  
CS-mine: an efficient WAP-tree mining for web access patterns  
Efficient frequent pattern mining on web logs  
Mining the predisposing factor and co-incident factor among numerical dynamic attributes in time series data set  
Query modification by discovering topics from web page structures  
Similarity pattern discovery using calendar concept hierarchy in time series data  
Loss minimization based keyword distillation  
Using maximum entropy model for Chinese text categorization  
A comparative study on feature weight in text categorization  
User-focus based personalization recommendation for text information retrieval  
Topic-structure based complementary information retrieval for information augmentation  
Similarity retrieval of web documents considering both text and style  
Knowledge retrieval using Bayesian associative relation in the three dimensional modular system  
User-oriented adaptive web information retrieval based on implicit observations  
High availability with clusters of web services  
Critical points for interactive schema matching
Algorithm for web services matching p. 665
A grid middleware for aggregating scientific computing libraries and parallel programming environments p. 671
Safe web queries p. 677
Specifying role-based access constraints with object constraint language p. 687
Engineering safe and efficient shareability within web systems p. 697
A comparative study of web application design models using the Java technologies p. 711
On reducing dynamic web page construction times p. 722
WIEAS : helping to discover web information sources and extract data from them p. 732
Aspect discovery : web contents characterization by their referential contexts p. 738
Web page fragmentation and content manipulation for constructing personalized portals p. 744
Template-based runtime invalidation for database-generated web contents p. 755
Clipart image retrieval system using shape information p. 765
Coordinated en-route web caching in transcoding proxies p. 772
Indexing for efficient managing current and past trajectory of moving object p. 782
A specification of a moving objects query language over GML for location-based services p. 788
Effective visualisation of workflow enactment p. 794
Verification of temporal constraints for concurrent workflows p. 804
Research on partner-choosing and web services composition for B2B E-commerce in virtual enterprises p. 814
A verification model for electronic transaction protocols p. 824
An ontology-oriented approach for virtual enterprises p. 834
Customer behavior pattern discovering with web mining p. 844
DM-XIDS - an application-layer router of incoming XML streams p. 854
Developing a main memory moving objects DBMS for high-performance location-based services p. 864
A detection model of direction relations for spatial and spatiotemporal objects p. 874
A proactive web agent for information browsing and extracting p. 879
Effective indexing of web images with keyword positioning p. 883
Design and simulation of multicast routing protocol for mobile internet p. 887
Java-based single sign-on library supporting SAML (security assertion markup language) for distributed web services p. 891
Novel SVM performance estimators for information retrieval systems p. 895
Capturing semantic hierarchies to perform meaningful integration in HTML tables p. 899
Viewing the web as a cube : the vision and approach p. 903
Fuzzy K-means clustering on a high dimensional semantic space p. 907
N-SHOQ(D) : a nonmonotonic extension of description logic SHOQ(D) p. 912
A highly adaptable web information extractor using graph data model p. 916
Mining web sequential patterns using reinforcement learning p. 920
Early experience in QoS-based service grid architecture p. 924
A multi-tier structured tool for requirements engineering process development p. 928
