Finding clusters and components by unsupervised learning

Kernel methods for exploratory pattern analysis : a demonstration on text data

The use of graph techniques for identifying objects and scenes in indoor building environments for mobile robots

Graphical-based learning environments for pattern recognition

Spectral analysis of complex Laplacian matrices

Decision tree structures for graph database filtering

A significant improvement of softassign with diffusion kernels

Structural perceptrons for attributed graphs

Eigenspace method by autoassociative networks for object recognition

A novel constraint-based approach to online graphics recognition

Extraction of skeletal shape features using a visual attention operator

Computing the cyclic edit distance for pattern classification by ranking edit paths

Contour segments from spline interpolation

Steady state random walks for path estimation

Learning of form models from exemplars

An optimal probabilistic graphical model for point set matching

A new variational framework for rigid-body alignment

An error-tolerant approximate matching algorithm for attributed planar graphs and its application to fingerprint classification

Comparison of algorithms for Web document clustering using graph representations of data

Heat kernels, manifolds and graph embedding

A syntactic pattern recognition approach to computer assisted translation

GIATI : a general methodology for finite-state translation using alignments

A coupled relaxation method for finding perceptual structures

A comparison of unsupervised shot classification algorithms for news video segmentation

Diagnosis of lung nodule using the semivariogram function

Dictionary-based syntactic pattern recognition using tries

Improving probabilistic automata learning with additional knowledge

Distances between distributions : comparing language models

A new uniform translocation distance

Understanding human-computer interactions in map revision

Multiscale curvature assessment of postural deviations

Modelling human shape with articulated shape mixtures

Learning people movement model from multiple cameras for behaviour recognition

A comparison of least squares and spectral methods for attributed graph matching

An auction algorithm for graph-based contextual correspondence matching

Segmentation graph hierarchies

Clustering variable length sequences by Eigenvector decomposition using HMM

A kernel view of spectral point pattern matching
Neural networks for improved target differentiation with sonar  p. 370
An MCMC feature selection technique for characterizing and classifying spatial region data  p. 379
Human action recognition by inference of stochastic regular grammars  p. 388
Optimizing classification ensembles via a genetic algorithm for a Web-based educational system  p. 397
A structural approach to adaptive inverse halftoning for document images  p. 407
Syntactic modeling and recognition of document images  p. 416
Symbols recognition system for graphic documents combining global structural approaches and using a XML representation of data  p. 425
Sketch recognition based on topological spatial relationship  p. 434
A study on the consistency of features for on-line signature verification  p. 444
Statistical structure of natural 4 x 4 image patches  p. 452
Grey scale skeletonisation with curvature sensitive noise damping  p. 461
License vehicle plates localization using maximum correlation  p. 470
Adaptive context for a discrete universal denoiser  p. 477
Pose estimation from airborne video sequences using a structural approach for the construction of homographies and fundamental matrices  p. 486
Temporal post-processing of decision tree outputs for sports video categorisation  p. 495
A new method of polyline approximation  p. 504
On extending symmetry sets for 2D shapes  p. 512
Structural analysis and matching of shape by logical property  p. 521
Scale descriptors through phase unwrapping  p. 530
Lung segmentation on postero-anterior digital chest radiographs using active contours  p. 538
Emotion recognition from dance image sequences using contour approximation  p. 547
Matching concavity trees  p. 556
Combining classifier for face identification at unknown views with a single model image  p. 565
A Logodds criterion for selection of diagnostic tests  p. 574
Evaluation of classical and novel ensemble methods for handwritten word recognition  p. 583
Improving support vector classification via the combination of multiple sources of information  p. 592
Fusing segmentation and classification from multiple features  p. 601
A classifier combination tree algorithm  p. 609
Bounds for the average generalization error of the mixture of experts neural network  p. 618
An effective EM algorithm for PCA mixture model  p. 626
EM initialisation for Bernoulli mixture learning  p. 635
A new family of weak estimators for training in non-stationary distributions  p. 644
Path relinking particle filter for human body pose estimation  p. 653
Clustering with soft and group constraints  p. 662
Learning from general label constraints  p. 671
Solving the one-class problem using neighbourhood measures  p. 680
Detection of a single texture in colour images  p. 689
Clustering based under-sampling for improving speaker verification decisions using AdaBoost  p. 698
Control of sparseness for feature selection  p. 707
On prediction mechanisms in fast branch & bound algorithms  p. 716
Structures of covariance matrix in handwritten character recognition  p. 725
Statistical machine translation decoding using target word reordering  p. 734
Classifier design for population and sensor drift  p. 744
A cost-sensitive paradigm for multiclass to binary decomposition schemes  p. 753
Cost-based classifier evaluation for imbalanced problems  p. 762
A two-stage classifier with reject option for text categorisation  p. 771
Misclassification probability estimations for linear decision functions  p. 780
Generalized variable-kernel similarity metric learning  p. 788
Approximate gradient direction metric for face authentication  p. 797
The imbalanced training sample problem: under or over sampling?  p. 806
Automatic preference mining through learning user profile with extracted information  p. 815
A computational study of naive Bayesian learning in anti-spam management  p. 824
Kernel-based non-linear template matching  p. 831
Analyzing weight distribution of feedforward neural networks and efficient weight initialization  p. 840
One-class support vector machines with a conformal kernel: a case study in handling class imbalance  p. 850
Automatic labeling of sports video using umpire gesture recognition  p. 859
Comparison of two fast nearest-neighbour search methods in high-dimensional large-sized databases  p. 868
A shallow description framework for musical style recognition  p. 876
A nearest neighbor method using bisectors  p. 885
Distance based strategy for supervised document image classification  p. 894
Identification of humans using robust biometric features  p. 903
Facial expression recognition based on the two-dimensional structures of affect  p. 912
Clustering using WCC models  p. 921
Algorithms for constructing min-max partitions of the parameter space for MDL inference  p. 930
Preclustering of electrocardiographic signals using left-to-right hidden Markov models  p. 939
Graph-based clustering of random point set  p. 948
Cluster validity and stability of clustering algorithms  p. 957
Bagging classification models with reduced bootstrap  p. 966
Multiple classifier prediction improvements against imbalanced datasets through added synthetic examples  p. 974
Automatic design of cascaded classifiers  p. 983
Recognition of handwritten numerals using a combined classifier with hybrid features p. 992
Generating classifier outputs with fixed diversity for evaluating voting methods p. 1001
Feature selection using improved mutual information for text classification p. 1010
Feature subset selection using an optimized hill climbing algorithm for handwritten character recognition p. 1018
Feature shaving for spectroscopic data p. 1026
Feature selection by Markov chain Monte Carlo sampling - a Bayesian approach p. 1034
Classifier-independent visualization of supervised data structures using a graph p. 1043
Texel-based texture synthesis with bunch sampling p. 1052
Towards 3-dimensional pattern recognition p. 1061
A general strategy for hidden Markov chain parameterisation in composite feature-spaces p. 1069
Tracking the evolution of a tennis match using hidden Markov models p. 1078
Local features for speaker recognition p. 1087
Selection/extraction of spectral regions for autofluorescence spectra measured in the oral cavity p. 1096
Kernel relative principal component analysis for pattern recognition p. 1105
Dynamic character model generation for document keyword spotting p. 1114
Texture classification by combining wavelet and contourlet features p. 1126
Distance measures between attributed graphs and second-order random graphs p. 1135
On not making dissimilarities Euclidean p. 1145
Content structure discovery in educational videos using shared structures in the hierarchical hidden Markov models p. 1155
