An explicit upper bound for the approximation ratio of the maximum gene regulatory network problem p. 1
Autonomous mobile robot control based on white blood cell chemotaxis p. 9
Beta binders for biological interactions p. 20
Biomimetic in silico devices p. 34
Building and analysing an integrative model of HIV-1 RNA alternative splicing p. 43
Graph-based modeling of biological regulatory networks: introduction of singular states p. 58
IMGT-choreography: processing of complex immunogenetics knowledge p. 73
Model checking biological systems described using ambient calculus p. 85
Modeling the molecular network controlling adhesion between human endothelial cells: inference and simulation using constraint logic programming p. 104
Modelling metabolic pathways using stochastic logic programs-based ensemble methods p. 119
Projective brane calculus p. 134
Residual bootstrapping and median filtering for robust estimation of gene networks from microarray data p. 149
Spatial modeling and simulation of diffusion in nuclei of living cells p. 161
The biochemical abstract machine BIOCHAM p. 172
Towards reusing model components in systems biology p. 192
VICE: a virtual CEII p. 207
Biological domain identification based in codon usage by means of rule and tree induction p. 221
Black box checking for biochemical networks p. 225
CMBSlib: a library for comparing formalisms and models of biological systems p. 231
Combining state-based and scenario-based approaches in modeling biological systems p. 236
Developing SBML beyond level 2: proposals for development p. 242
General stochastic hybrid method for the simulation of chemical reaction processes in cells p. 248
The biodegradation network, a new scenario for computational systems biology research p. 252
Brane calculi, interactions of biological membranes p. 257
