Lane change maneuvers consuming freeway capacity p. 3
Empirical description of car-following p. 15
Optimization potential of a highway network: an empirical study p. 29
Observation, theory and experiment for freeway traffic as physics of many-body system p. 45

Fluctuation in expressway traffic flow p. 59
Calibration and validation of microscopic traffic flow models p. 67
Real highway traffic simulations based on a cellular automata model p. 73
Traffic data collection and study with the BirdEye system p. 79
Probabilistic traffic flow breakdown in stochastic car following models p. 87
A wave-based resolution scheme for the hydrodynamic LWR traffic flow model p. 105
Various scales for traffic flow representation: some reflections p. 125
Comparison of congested pattern features at different freeway bottlenecks p. 141
Congestion due to merging roads: predictions of three-phase traffic theory p. 161
Production, supply, and traffic systems: a unified description p. 173
Capacity funnel explained using the human-kinetic traffic flow model p. 189
A comparison of a cellular automaton and a macroscopic model p. 199
Stochastic description of traffic breakdown: Langevin approach p. 205
Towards noise-induced phase transitions in systems of elements with motivated behavior p. 211
Using the road traffic simulation "SUMO" for educational purposes p. 217
Approximating traffic flow by a Schrödinger equation: introduction of non-reflecting boundary conditions p. 223
Modeling and managing traffic flow through hyperbolic conservation laws p. 229
Conservation versus balance laws in traffic flow p. 235
Introducing the effects of slow vehicles in a LWR two-flow traffic model p. 241
Bifurcation analysis of meta-stability and waves of the OV model p. 247
Pinch effect in a cellular automaton (CA) model for traffic flow p. 253
Intersection modeling, application to macroscopic network traffic flow models and traffic management p. 261
Granular transport policy: is cooperation better than optimization? p. 279
Real-time motorway network traffic surveillance tool RENAISSANCE p. 295
Minority game - experiments and simulations p. 305
Experimental investigation of a two route scenario with construction areas p. 317
Phase diagrams of an Internet model with multi-allocation of sites p. 325
Adaptive traffic light control in the ChSch model for city traffic p. 331
Vehicle flow and phase transitions in traffic networks p. 337
Anomalous fundamental diagrams in traffic on ant trails p. 343
Models for crowd movement and egress simulation p. 357
Self-organization in pedestrian flow p. 373
A comparison of video and infrared based tracking of pedestrian movements p. 383
Statistical analysis of the panic in the pedestrian flow p. 393
Group formation of organisms in 2-dimensional OV model p. 399
Simulations of evacuation by an extended floor field CA model p. 405
Pedestrian pulse dispersion in an underground station p. 411
Population and distance criteria for pedestrian decisions p. 417
Simulation of the evacuation of a football stadium using the CA model PedGo p. 423
Statistical properties of dense granular matter p. 431
Small scale modelling of large granular systems in a centrifuge p. 445
Weakly frictional granular gases p. 459
The physics of overcharging p. 475
Computer simulations of magnetic grains p. 489
Simulation of particle transport and structure formation by deposition p. 503
Experiment and simulation of electrospray particle-flows for controlled release of drugs p. 513
The Branly effect and contacting grains in a packing p. 521
Universal wide shear zones in granular bulk flow p. 525
Numerical stress response functions of static granular layers p. 531
Granular segregation in hydraulic ripples p. 537
Grain motion under air flow p. 543
Bubble and granular flows : differences and similarities p. 553
The global property of the dilute-to-dense transition of granular flows in a 2D channel p. 559
From granular flux model to traffic flow description p. 569
Simple models for compartmentalized sand p. 579
Several numerical approaches of granular flows applied to inclined plane studies p. 585
A modified tetris model including the effect of friction p. 591
An aspect of granulence in view of multifractal analysis p. 597
