Ontology mapping: a way out of the medical Tower of Babel? p. 3

Human computer interaction in context aware wearable systems p. 7

A new approach to the abstraction of monitoring data in intensive care p. 13

Learning rules with complex temporal patterns in biomedical domains p. 23

Discriminating exanthematic diseases from temporal patterns of patient symptoms p. 33

Probabilistic abstraction of multiple longitudinal electronic medical records p. 43

Using a Bayesian-network model for the analysis of clinical time-series data p. 48

Data-driven analysis of blood glucose management effectiveness p. 53

Extending temporal databases to deal with telic/ateletic medical data p. 58

 Dichotomization of ICU length of stay based on model calibration p. 67

AtherEx: an expert system for atherosclerosis risk assessment p. 79

Smooth integration of decision support into an existing electronic patient record p. 89

REPS: a rehabilitation expert system for post-stroke patients p. 94

Testing Asbru guidelines and protocols for neonatal intensive care p. 101

EORCA: a collaborative activities representation for building guidelines from field observations p. 111

Design patterns for modelling medical guidelines p. 121

Improving clinical guideline implementation through prototypical design patterns p. 126

Automatic derivation of a decision tree to represent guideline-based therapeutic strategies for the management of chronic diseases p. 131

Exploiting decision theory for supporting therapy selection in computerized clinical guidelines p. 136

Helping physicians to organize guidelines within conceptual hierarchies p. 141

MHB: a many-headed bridge between informal and formal guideline representations p. 146

Clinical guidelines adaptation: managing authoring and versioning issues p. 151

Open-source publishing of medical knowledge for creation of computer-interpretable guidelines p. 156

A history-based algebra for quality-checking medical guidelines p. 161

The spock system: developing a runtime application engine for hybrid-Asbru guidelines p. 166

AI planning technology as a component of computerized clinical practice guidelines p. 171

Gaining process information from clinical practice guidelines using information extraction p. 181

Ontology-driven extraction of linguistic patterns for modelling clinical guidelines p. 191

Formalising medical quality indicators to improve guidelines p. 201

Oncology ontology in the NCI thesaurus p. 213

Ontology-mediated distributed decision support for breast cancer p. 221

Multimedia data management to assist tissue microarrays design p. 226

Building medical ontologies based on terminology extraction from texts: methodological propositions p. 231

Translating biomedical terms by inferring transducers p. 236

Using lexical and logical methods for the alignment of medical terminologies p. 241
Latent argumentative pruning for compact MEDLINE indexing
A benchmark evaluation of the French MeSH indexers
Populating an allergens ontology using natural language processing and machine learning techniques
Ontology of time and situoids in medical conceptual modeling
The use of verbal classification in determining the course of medical treatment by medicinal herbs
Interactive knowledge validation in CBR for decision support in medicine
Adaptation and medical case-based reasoning, focusing on endocrine therapy support
Transcranial magnetic stimulation (TMS) to evaluate and classify mental diseases using neural networks
Towards information visualization and clustering techniques for MRI data sets
Electrocardiographic imaging : towards automated interpretation of activation maps
Automatic landmarking of cephalograms by cellular neural networks
Anatomical sketch understanding : recognizing explicit and implicit structure
Morphometry of the hippocampus based on a deformable model and support vector machines
Automatic segmentation of whole-body bone scintigrams as a preprocessing step for computer assisted diagnostics
Multi-agent patient representation in primary care
Clinical reasoning learning with simulated patients
Implicit learning system for teaching the art of acute cardiac infarction diagnosis
Which kind of knowledge is suitable for redesigning hospital logistic processes?
Web mining techniques for automatic discovery of medical knowledge
Resource modeling and analysis of regional public health care data by means of knowledge technologies
An evolutionary divide and conquer method for long-term dietary menu planning
Human/computer interaction to learn scenarios from ICU multivariate time series
Mining clinical data : selecting decision support algorithm for the MET-AP system
A data pre-processing method to increase efficiency and accuracy in data mining
Rule discovery in epidemiologic surveillance data using EpiXCS : an evolutionary computation approach
Subgroup mining for interactive knowledge refinement
Evidence accumulation for identifying discriminatory signatures in biomedical spectra
On understanding and assessing feature selection bias
A model-based approach to visualizing classification decisions for patient diagnosis
Learning rules from multisource data for cardiac monitoring
Effective confidence region prediction using probability forecasters
Signature recognition methods for identifying influenza sequences
Conquering the curse of dimensionality in gene expression cancer diagnosis: tough problem, simple models  p. 514

An algorithm to learn causal relations between genes from steady state data: simulation and its application to melanoma dataset  p. 524

Relation mining over a corpus of scientific literature  p. 535
