Database system architecture - a walk through time: from centralized platform to mobile computing - keynote address

Extending wide-area replication support with mobility and improved recovery

Extending databases to precision-controlled retrieval of qualitative information

An approach for solving very large scale instances of the design distribution problem for distributed database systems

On the abstraction of message-passing communications using algorithmic skeletons: a case study

Implementing distributed mutual exclusion on multithreaded environments: the alien-threads approach

On time analysis of random walk based token circulation algorithms

Architecture for media streaming delivery over P2P networks

On the role of information compaction to intrusion detection

A hybrid framework of RR scheduler to ensure priority, low complexity and delay with relative fairness

Data hiding in identification and offset IP fields

Interpretation of UML sequence diagrams as causality flows

A proposal for on-line reconfiguration based upon a modification of planning scheduler and fuzzy logic control law response

Integrated tool for testing timed systems

Conformance testing of real-time component based systems

Modeling multiple interactions using coloured petri nets: a case study

A framework for information integration with uncertainty

Model fragmentation for distributed workflow execution: a petri net approach

An online component deployment system for dynamic collaborative sessions

Complexity in collaborative online socio-interationist environments: a good reason for distributed systems

Injecting communication faults to experimentally validate Java distributed applications

Implementing rollback-recovery coordinated checkpoints

An identity-based model for grid security infrastructure

Lineage tracing in mediator-based information integration systems

Combining sources of evidence for recognition of relevant passages in texts

A hierarchical and by role multi-agent organization: application to the information retrieval

Evaluating a scientific SPMD application on a computational grid with different load balancing techniques

Increasing the training speed of SVM, the zoutendijk algorithm case

Video motion detection using the algorithm of discrimination and the hamming distance

An efficient and grain preservation mapping algorithm: from ER diagram to multidimensional model

Quadratic optimization fine tuning for the learning phase of SVM

WFCTA (weighted fair channel time allocation) and its analysis for HR-WPAN

Performance analysis of two approaches to service discovery in mobile ad hoc networks
BCTMA (Bi-directional cut-through medium access) protocol for 802.11-based multi-hop wireless networks p. 377
Some security issues of wireless systems p. 388
Overview the key management in ad hoc networks p. 397
On performance improvement for 802.11-based multi-hop ad hoc wireless networks p. 407
Analysis of context transfer in seamless IP mobility p. 417
An introduction to evolutionary algorithms and their applications p. 425
Distributed anticipatory system p. 443
Memory as an active component of a behavioral animation system p. 452
Growing functional modules, a prospective paradigm for epigenetic artificial intelligence p. 465
Specifying agent's goals in 3D scenarios using process algebras p. 472
A new approach for offer evaluation in multi-agent system negotiation based in evidential paraconsistent logic p. 483
A voice-enabled assistant in a multi-agent system for e-government services p. 495
CAS - an interface generator in natural language to information system p. 504
A formal approach to model multiagent interactions using the B formal method p. 516
Behavioral self-control of agent-based virtual pedestrians p. 529
Security challenges of distributed e-learning systems p. 538
A component-based transactional service, including advanced transactional models p. 545
