On the use of virtualization and service technologies to enable grid-computing | p. 1
The evolution of the blue gene/L supercomputer | p. 13
Agent based computational grids: research issues and challenges | p. 14
Science on a large scale | p. 15
Tolerating message latency through the early release of blocked receives | p. 19
Fast convex closure for efficient predicate detection | p. 30
A generic language for dynamic adaptation | p. 40
Soft computing approach to performance analysis of parallel and distributed programs | p. 50

The data diffusion space for parallel computing in clusters | p. 61
Models for on-the-fly compensation of measurement overhead in parallel performance profiling | p. 72
Modeling pipeline applications in POETRIES | p. 83
Automatic tuning of master/worker applications | p. 95
Performance cockpit: an extensible GUI platform for performance tools | p. 104
Apex-map: a synthetic scalable benchmark probe to explore data access performance on highly parallel systems | p. 114
PerfMiner: cluster-wide collection, storage and presentation of application level hardware performance data | p. 124
Performance evaluation of MM5 on clusters with modern interconnects: scalability and impact | p. 134
A performance measurement infrastructure for co-array fortran | p. 146
Event-based measurement and analysis of one-sided communication | p. 156
An efficient multi-level trace toolkit for multi-threaded applications | p. 166
Knowledge based automatic scalability analysis and extrapolation for MPI programs | p. 176

Performance modeling: understanding the past and predicting the future | p. 185
An approach to performance prediction for parallel applications | p. 196
Balancing parallel adaptive FEM computations by solving systems of linear equations | p. 209

CISNE: a new integral approach for scheduling parallel applications on non-dedicated clusters | p. 220
On optimum multi-installment divisible load processing in heterogeneous distributed systems | p. 231
A scalable parallel graph coloring algorithm for distributed memory computers | p. 241
Complexity and approximation for the precedence constrained scheduling problem with large communication delays | p. 252
Batch-scheduling dags for Internet-based computing | p. 262
Scheduling workflow distributed applications in JavaSymphony | p. 272
Tasks mapping with quality of service for coarse grain parallel applications | p. 282
Initiating load balancing operations | p. 292
Hierarchical scheduling for moldable tasks | p. 302
On-line bicriteria interval scheduling | p. 312
The periodic-linear model of program behavior capture | p. 325
Deciding where to call performance libraries | p. 336
MADIS: a slim middleware for database replication
Hierarchical aggregation in networked data management
Mining global association rules on an oracle grid by scanning once distributed databases
Combining data replication algorithms and job scheduling heuristics in the data grid
Towards high-level grid programming and load-balancing: a Barnes-Hut case study
An adaptive skeletal task farm for grids
Developing Java grid applications with Ibis
Virtual workspaces in the grid
Modeling machine availability in enterprise and wide-area distributed computing environments
Faults in large distributed systems and what we can do about them
A grid information service based on peer-to-peer
GRUBER: a grid resource usage SLA broker
An architecture for distributed grid brokering
The combined perceptron branch predictor
Target encoding for efficient indirect jump prediction
Dynamic partition of memory reference instructions - a register guided approach
Value compression for efficient computation
Improving instruction delivery with a block-aware ISA
Non-uniform instruction scheduling
Instruction recirculation: eliminating counting logic in wakeup-free schedulers
Early experience with scientific applications on the blue gene/L supercomputer
A detailed study on phase predictors
A novel lightweight directory architecture for scalable shared-memory multiprocessors
A dynamic distributed algorithm for multicast path setup
Distributed maintenance of a spanning tree using labeled tree encoding
Replication predicates for dependent-failure algorithms
Consistent data replication: is it feasible in WANs?
A hybrid message logging-CIC protocol for constrained checkpointability
A fault-tolerant token-based mutual exclusion algorithm using a dynamic tree
Self-stabilizing publish/subscribe systems: algorithms and evaluation
A checkpoint/recovery model for heterogeneous dataflow computations using work-stealing
A paradigm for parallel matrix algorithms: scalable Cholesky
An exception handling mechanism for the concurrent invocation statement
smt-SPRINTS: software precomputation with intelligent streaming for resource-constrained SMTs
Symmetric data objects and remote memory access communication for Fortran-95 applications
Using aspects for supporting procedural modules in # programming
Multi-threaded testing with AOP is easy, and it finds bugs!
An investigation of sharing strategies for answer set solvers and SAT solvers p. 750
Flexible skeletal programming with eSkel p. 761
Dynamic reconfiguration of grid-aware applications in ASSIST p. 771
SPC-XML : a structured representation for nested-parallel programming languages p. 782
Performance measurements of the 3D FFT on the blue gene/L supercomputer p. 795
Parallel solution of sparse linear systems arising in advection-diffusion problems p. 804
Parallelization of implicit-explicit Runge-Kutta methods for cluster of PCs p. 815
Comparison of different parallel modified Gram-Schmidt algorithms p. 826
Automatic tuning of PDGEMM towards optimal performance p. 837
Parallelization of divide-and-conquer eigenvector accumulation p. 847
Parallel order reduction via balanced truncation for optimal cooling of steel profiles p. 857
Broadcast-based parallel LU factorization p. 867
Dynamic distributed collaborative merging policy to optimize the multicasting delivery scheme p. 879
Dynamic proxy-cache multiplication inside LANs p. 890
Perspectives for lecture videos p. 901
A scene-based bandwidth allocation scheme for transferring VBR-encoded videos p. 909
DCT block conversion for H.264/AVC video transcoding p. 919
Efficient bufferless routing on leveled networks p. 931
Efficient truthful mechanisms for the single-source shortest paths tree problem p. 941
Optimal embedding of the hypercube on partitioned optical passive stars networks p. 952
Dynamic page migration under Brownian motion p. 962
Transport time distribution for deflection routing on an odd torus p. 975
Routing and scheduling for a novel optical multistage interconnection network p. 984
Topology-based hypercube structures for global communication in heterogeneous networks p. 994
Performance effects of node mappings on the IBM BlueGene/L machine p. 1005
INSEE : an interconnection network simulation and evaluation environment p. 1014
Cost / performance trade-offs and fairness evaluation of queue mapping policies p. 1024
On the correct sizing on meshes through an effective congestion management strategy p. 1035
A new hardware efficient link scheduling algorithm to guarantee QoS on clusters p. 1046
An efficient and fault-tolerant update commitment protocol for weakly connected replicas p. 1059
Controlling concurrency in mobile computing environments with broadcast-based data dissemination p. 1069
Integrating mobile devices into the grid : design considerations and evaluation p. 1080
New bounds on the competitiveness of randomized online call control in cellular networks p. 1089
A multiple channel access protocol for ad hoc wireless networks p. 1100
Personalized access to semantic Web agents using smart cards p. 1110
Fast and secure communication resume protocol for wireless networks p. 1120
On AAA based on brokers and pre-encrypted keys in MIPv6
Epidemic-style management of semantic overlays for content-based searching
Long range contacts in overlay networks
Combining the use of clustering and scale-free nature of user exchanges into a simple and efficient P2P system
Pastis : a highly-scalable multi-user peer-to-peer file system
AGNO : an adaptive group communication scheme for unstructured P2P networks
Semantic peer-to-peer overlays for publish/subscribe networks
Parallel linear space algorithm for large-scale sequence alignment
Parallel multiple sequence alignment with decentralized cache support
Parallel construction of large suffix trees on a PC cluster
Parallel edge-based inexact Newton solution of steady incompressible 3D Navier-Stokes equations
High performance computing for a financial application using fast Fourier transform
Parallel simulation of the propagation of powdery mildew in a vineyard
Parallelism for perturbation management and robust plans
SPH2000 : a parallel object-oriented framework for particle simulations with SPH
Grid-BGC : a grid-enabled terrestrial carbon cycle modeling system
