Designing reliable algorithms in unreliable memories
From balanced graph partitioning to balanced metric labeling
Fearful symmetries: quantum computing, factoring, and graph isomorphism
Exploring an unknown graph efficiently
Online routing in faulty meshes with sub-linear comparative time and traffic ratio
Heuristic improvements for computing maximum multicommodity flow and minimum multicut
Relax-and-cut for capacitated network design
On the price of anarchy and stability of correlated equilibria of linear congestion games
The complexity of games on highly regular graphs
Computing equilibrium prices: does theory meet practice?
Efficient exact algorithms on planar graphs: exploiting sphere cut branch decompositions
An algorithm for the SAT problem for formulae of linear length
Linear-time enumeration of isolated cliques
Finding shortest non-separating and non-contractible cycles for topologically embedded graphs
Delineating boundaries for imprecise regions
EXACUS: efficient and exact algorithms for curves and surfaces
Min sum clustering with penalties
Improved approximation algorithms for metric max TSP
Unbalanced graph cuts
Low degree connectivity in ad-hoc networks
5-regular graphs are 3-colorable with positive probability
Optimal integer alphabetic trees in linear time
Predecessor queries in constant time?
An algorithm for node-capacitated ring routing
On degree constrained shortest paths
A new template for solving p-median problems for trees in sub-quadratic time
Roll cutting in the curtain industry
Space efficient algorithms for the burrows-wheeler backtransformation
Cache-oblivious comparison-based algorithms on multisets
Oblivious vs. distribution-based sorting: an experimental evaluation
Allocating memory in a lock-free manner
Generating realistic terrains with higher-order delaunay triangulations
I/O-efficient construction of constrained delaunay triangulations
Convex hull and voronoi diagram of additively weighted points
New tools and simpler algorithms for branchwidth
Treewidth lower bounds with brambles
Minimal interval completions
A 2-approximation algorithm for sorting by prefix reversals
