Conjugated complexes with quinonediimine derivatives p. 3
Realizing the ultimate amplification in conducting polymer sensors: isolated nanoscopic pathways p. 29
Metal-containing [π]-conjugated materials p. 45
Redox active architectures and carbon-rich ruthenium complexes as models for molecular wires p. 55
Molecular metal wires built from a linear metal atom chain supported by oligopyridylamido ligands p. 85
Multielectron redox catalysts in metal-assembled macromolecular systems p. 119
Triruthenium cluster oligomers that show multistep/multielectron redox behavior p. 133
Molecular architecture of redox-active multilayered metal complexes based on surface coordination chemistry p. 141
Programmed metal arrays by means of designable biological macromolecules p. 155
Metal-incorporated hosts for cooperative and responsive recognition to external stimulus p. 167
Synthesis of poly(binaphthol) via controlled oxidative coupling p. 179
Nano Meccano p. 193
Through-space control of redox reactions using interlocked structure of rotaxanes p. 215

Metal-containing star and hyperbranched polymers p. 233
Electronic properties of helical peptide derivatives at a single molecular level p. 249
Construction of redox-induced systems using antigen-combining sites of antibodies and functionalization of antibody supramolecules p. 263
