Algorithmic challenges in Web search engines p. 1
RNA molecules: glimpses through an algorithmic lens p. 8
Squares p. 11
Matching based augmentations for approximating connectivity problems p. 13
Modelling errors and recovery for communication p. 25
Lossless data compression via error correction p. 26
The power and weakness of randomness in computation p. 28
A new GCD algorithm for quadratic number rings with unique factorization p. 30
On clusters in Markov chains p. 43
An architecture for provably secure computation p. 56
Scoring matrices that induce metrics on sequences p. 68
Data structures for halfplane proximity queries and incremental Voronoi diagrams p. 80
The complexity of diffuse reflections in a simple polygon p. 93
Counting proportions of sets: expressive power with almost order p. 105
Efficient approximate dictionary look-up for long words over small alphabets p. 118
Relations among notions of security for identity based encryption schemes p. 130
Optimally adaptive integration of univariate Lipschitz functions p. 142
Classical computability and fuzzy turing machines p. 154
An optimal algorithm for the continuous/discrete weighted 2-center problem in trees p. 166
An algorithm for a generalized maximum subsequence problem p. 178
Random bichromatic matchings p. 190
Eliminating cycles in the discrete torus p. 202
On behalf of the seller and society: bicriteria mechanisms for unit-demand auctions p. 211
Pattern matching statistics on correlated sources p. 224
Robust model-checking of linear-time properties in timed automata p. 238
The computational complexity of the parallel knock-out problem p. 250
Reconfigurations in graphs and grids p. 262
C-varieties, actions and wreath product p. 274
Local construction of planar spanners in unit disk graphs with irregular transmission ranges p. 286
An efficient approximation algorithm for point pattern matching under noise p. 298
Oblivious medians via online bidding p. 311
Efficient computation of the relative entropy of probabilistic automata p. 323
A parallel algorithm for finding all successive minimal maximum subsequences p. 337
De dictionariis dynamicis pauco spatio utentibus (lat. on dynamic dictionaries using little space) p. 349
Customized newspaper broadcast: data broadcast with dependencies p. 362
On minimum k-modal partitions of permutations p. 374
Two birds with one stone: the best of branchwidth and treewidth with one algorithm p. 386
Maximizing throughput in queueing networks with limited flexibility p. 398
Network flow spanners p. 410
Finding all minimal infrequent multi-dimensional intervals p. 423
Cut problems in graphs with a budget constraint p. 435
Lower bounds for clear transmissions in radio networks p. 447
Asynchronous behavior of double-quiescent elementary cellular automata p. 455
Lower bounds for geometric diameter problems p. 467
Connected treewidth and connected graph searching p. 479
A faster algorithm for finding maximum independent sets in sparse graphs p. 491
The committee decision problem p. 502
Common deadline lazy bureaucrat scheduling revisited p. 515
Approximate sorting p. 524
Stochastic covering and adaptivity p. 532
Algorithms for modular counting of roots of multivariate polynomials p. 544
Hardness amplification via space-efficient direct products p. 556
The online freeze-tag problem p. 569
I/O-efficient algorithms on near-planar graphs p. 580
Minimal split completions of graphs p. 592
Design and analysis of online batching systems p. 605
Competitive analysis of scheduling algorithms for aggregated links p. 617
A 4-approximation algorithm for guarding 1.5-dimensional terrains p. 629
On sampling in higher-dimensional peer-to-peer systems p. 641
Mobile agent rendezvous in a synchronous torus p. 653
Randomly colouring graphs with girth five and large maximum degree p. 665
Sharp estimates for the main parameters of the euclid algorithm p. 689
Position-restricted substring searching p. 703
Rectilinear approximation of a set of points in the plane p. 715
The branch-width of circular-arc graphs p. 727
Minimal Eulerian circuit in a labeled digraph p. 737
Speeding up approximation algorithms for NP-hard spanning forest problems by multi-objective optimization p. 745
RISOTTO : fast extraction of motifs with mismatches p. 757
Minimum cost source location problems with flow requirements p. 769
Exponential lower bounds on the space complexity of OBDD-based graph algorithms p. 781
Constructions of approximately mutually unbiased bases p. 793
Improved exponential-time algorithms for treewidth and minimum fill-in p. 800
