Functional classification of G-protein coupled receptors, based on their specific ligand coupling patterns p. 1
Incorporating biological domain knowledge into cluster validity assessment p. 13
A novel mathematical model for the optimization of DNA-chip design and its implementation p. 23
A hybrid GA/SVM approach for gene selection and classification of microarray data p. 34

Multi-stage evolutionary algorithms for efficient identification of gene regulatory networks p. 45
Human papillomavirus risk type classification from protein sequences using support vector machines p. 57
Hierarchical clustering, languages and cancer p. 67
Robust SVM-based biomarker selection with noisy mass spectrometric proteomic data p. 79

On the use of variable complementarity for feature selection in cancer classification p. 91
Comparison of neural network optimization approaches for studies of human genetics p. 103

Obtaining biclusters in microarrays with population-based heuristics p. 115
Multiple sequence alignment based on set covers p. 127
A methodology for determining amino-acid substitution matrices from set covers p. 138
Multi-objective evolutionary algorithm for discovering peptide binding motifs p. 149
Mining structural databases : an evolutionary multi-objective conceptual clustering methodology p. 159
Optimal selection of microarray analysis methods using a conceptual clustering algorithm p. 172
Microaxray probe design using [epsilon]-multi-objective evolutionary algorithms with thermodynamic criteria p. 184

An algorithm for the automated verification of DNA supercontig assemblies p. 196
From HP lattice models to real proteins : coordination number prediction using learning classifier systems p. 208
Conditional random fields for predicting and analyzing histone occupancy, acetylation and methylation areas in DNA sequences p. 221
DNA fragment assembly : an ant colony system approach p. 231
BeeHiveGuard : a step towards secure nature inspired routing algorithms p. 243
Optimal broadcasting in metropolitan MANETs using multiobjective scatter search p. 255
Evolutionary design of OAB and AAB communication schedules for interconnection networks p. 267

A multiagent algorithm for graph partitioning p. 279
Tracing denial of service origin : ant colony approach p. 286
Optimisation of constant matrix multiplication operation hardware using a genetic algorithm p. 296
Finding compact BDDs using genetic programming p. 308
Efficient evolutionary approaches for the data ordering problem with inversion p. 320
GRACE : generative robust analog circuit exploration p. 332
On the practical limits of the evolutionary digital filter design at the gate level p. 344
Image space colonization algorithm p. 356
Enhancement of an automatic fingerprint identification system using a genetic algorithm and genetic programming p. 368
Evolutionary singularity filter bank optimization for fingerprint image enhancement p. 380
Evolutionary generation of prototypes for a learning vector quantization classifier p. 391
Automatic classification of handsegmented image parts with differential evolution p. 403
Mixed-integer evolution strategies and their application to intravascular ultrasound image analysis p. 415
The honeybee search algorithm for three-dimensional reconstruction p. 427
Improving the segmentation stage of a pedestrian tracking video-based system by means of evolution strategies p. 438
An adaptive stochastic collision detection between deformable objects using particle swarm optimization p. 450
Genetic programming for automatic stress detection in spoken English p. 460
Localisation fitness in GP for object detection p. 472
Immune multiobjective optimization algorithm for unsupervised feature selection p. 484
Classifying and counting vehicles in traffic control applications p. 495
A neural evolutionary classification method for brain-wave analysis p. 500
Differential evolution applied to a multimodal information theoretic optimization problem p. 505
Artificial life models in lung CTs p. 510
Learning high-level visual concepts using attributed primitives and genetic programming p. 515
Evolutionary denoising based on an estimation of Holder exponents with oscillations p. 520
Probability evolutionary algorithm based human body tracking p. 525
On interactive evolution strategies p. 530
An experimental comparative study for interactive evolutionary computation problems p. 542
Creating chance by new interactive evolutionary computation: bipartite graph based interactive genetic algorithm p. 554
Interactive evolutionary computation framework and the on-chance operator for product design p. 565
Practically applying interactive genetic algorithms to customers' designs on a customizable C2C framework: entrusting select operations to IGA users p. 575
Evaluation of sequential, multi-objective, and parallel interactive genetic algorithms for multi-objective floor plan optimisation p. 586
Supervised genetic search for parameter selection in painterly rendering p. 599
Robot paintings evolved using simulated robots p. 611
Consensual paintings p. 622
Using physiological signals to evolve art p. 633
Science of networks and music: a new approach on musical analysis and creation p. 642
Continuous-time recurrent neural networks for generative and interactive musical performance  p. 652
Synthesising timbres and timbre-changes from adjectives/adverbs  p. 664
Modelling expressive performance: a regression tree approach based on strongly typed genetic programming  p. 676
Evolutionary musique concrete  p. 688
A connectionist architecture for the evolution of rhythms  p. 696
MovieGene: evolutionary video production based on genetic algorithms and cinematic properties  p. 707
Audible convergence for optimal base melody extension with statistical genre-specific interval distance evaluation  p. 712
A two-stage autonomous evolutionary music composer  p. 717
Layered genetical algorithms evolving into musical accompaniment generation  p. 722
A preliminary study on handling uncertainty in indicator-based multiobjective optimization  p. 727
Fluctuating crosstalk as a source of deterministic noise and its effects on GA scalability  p. 740
Integrating techniques from statistical ranking into evolutionary algorithms  p. 752
The role of representations in dynamic knapsack problems  p. 764
The effect of building block construction on the behavior of the GA in dynamic environments: a case study using the shaky ladder hyperplane-defined functions  p. 776
Associative memory scheme for genetic algorithms in dynamic environments  p. 788
Bayesian optimization algorithms for dynamic problems  p. 800
Prudent-daring vs tolerant survivor selection schemes in control design of electric drives  p. 805
