Dynamic simulation of note transitions in reed instruments : application to the clarinet and the saxophone p. 1

The BRASS project, from physical models to virtual musical instruments : playability issues p. 24

The pureCMusic (pCM++) framework as open-source music language p. 34

Timbre variations as an attribute of naturalness in clarinet play p. 45

Scoregram : displaying gross timbre information from a score p. 54

A possible model for predicting listeners' emotional engagement p. 60

About the determination of key of a musical excerpt p. 76

An interactive musical exhibit based on infrared sensors p. 92

Metriss : a game environment for music performance p. 101

Strategies for the control of microsound synthesis within the "GMU" project p. 110

Building low-cost music controllers p. 123

Evaluation of sensors as input devices for computer music interfaces p. 130

Aspects of the multiple musical gestures p. 140

Gran Cassa and the adaptive instrument feed-drum p. 149

Generating and modifying melody using editable noise function p. 164

Unifying performer and accompaniment p. 169

Recognizing chords with EDS : part one p. 185

Improving prototypical artist detection by penalizing exorbitant popularity p. 196

Music analysis and modeling through Petri nets p. 201

A review on techniques for the extraction of transients in musical signals p. 219

Dimensionality reduction in harmonic modeling for music information retrieval p. 233

Abstracting musical queries : towards a musicologist's workbench p. 249

An editor for lute tablature p. 259

Interdisciplinarity and computer music modeling and information retrieval : when will the humanities get into the act? p. 265
