Preface
The solar dynamo p. 1
The differential solar rotation p. 27
Oscillatory dynamos showing change of parity on a large time scale p. 49
A new reconstruction of solar activity, 1610-1993 p. 57
The Maunder minimum and the solar dynamo p. 71
Panel discussion on The modern status of solar dynamo p. 99
Theories of radius and luminosity variations p. 107
A technique for estimating long-term variations of solar total irradiance: Preliminary estimates based on observations of the Sun and solar-type stars p. 133
Surrogates for total solar irradiance p. 145
Solar forcing of global change p. 163
The observed spatial non-uniformity and temporal variability of the solar limb-darkening function p. 185
Panel discussion on Solar diameter variations p. 193
Atmospheric $^{14}$C as a proxy of solar and climatic change $^{10}$Be as an indicator of solar variability and climate p. 203 p. 221
Panel discussions on Total solar irradiance variations and the Maunder minimum p. 235
The quasi-biennial oscillation in the Earth's atmosphere and its links to longer period variability p. 259
The quasi-biennial oscillation observed in the semi-diurnal ground pressure data and in the ionospheric F layer p. 275
The quasi-biennial oscillation (QBO): some points about the terrestrial QBO and the possibility of related phenomena in the solar interior p. 293
Sensitivity of climate to variations of the solar output: radiative processes and their parametrization in numerical models p. 321
Climate sensitivity: cloud and water feedbacks and their assessment p. 353
Panel discussion on Putting solar variability in perspective p. 369
Aspects of a decadal Sun-atmosphere connection p. 381
Viewpoints concerning solar activity effects on the atmospheric circulation and climate p. 395
Concerning various types of solar forcing and their effects p. 403
Panel discussion on The solar and climatic relations p. 405
Grasping at shadows? A selective review of the search for sunspot-related variability in tree rings p. 417
Perspectives on the climate of the last 500 years p. 437
The 10.8 years solar cycle recorded in sea sediments during the last 4000 years p. 449
Panel discussion on Paleoclimatic data p. 465
Sensitivity of climate to long-term variations of the solar output p. 479
Have solar-irradiance variations influenced climate? p. 493
Sensitivity of the atmospheric circulation to solar irradiance variations p. 507
Comment on the ocean albedo and absorption p. 517
Panel discussion on Climatic response to variation in the solar forcing p. 523
