On the Structure of Discrete Systems p. 3
Identification and Recognition through Shape in Complex Systems p. 19
A Logical Approach to System Construction p. 30
Task Management System p. 48
Toward a unified theory of discrete event systems p. 62
Intersensorial Transformations: General Systems Description and Implications p. 73
Proving System Properties by Means of Trigger-Graph and Petri Nets p. 88
Refinement Mapping for General (Discrete Event) Systems Theory p. 103
A System-Theoretic Approach to Planning and Programming p. 117
Equality of Functions in CAST p. 129
Basins of Attraction Estimation Through Symbolic Graphical Computing Techniques p. 137
Temporal and Functional Verification of a Symbolic Representation of Complex Systems p. 151

Modelling Differential Equations by Basic Information Technology Means p. 163
System Theoretic Aspects of Software Architectures p. 175
A Language for Describing Complex-Evolutive Software Systems p. 181
An Architecture for Process Modeling and Execution Support p. 201
A Formal Semantics for a Graphical Model Representation in System Design p. 217
A User-Interface for a Microsystems High-level Simulator p. 228
CAST Extensions to DASME to Support Generalized Information Theory p. 237
Symbolic Computing Aided Design of Nonlinear PID Controllers p. 253
Discrete Event Simulation in an Environment for Temporal Expert Systems p. 271
TOMSPIN - A Tool for Modeling with Stochastic Petri Nets p. 283
Hybrid Evolutionary Programming: the Tools for CAST p. 289
Automatic Induction of DEVS Structures p. 305
Systems Engineering and Infrastructures for Open Computer Based Systems p. 317
Object-Oriented High Level Modeling of Complex Systems p. 332
Multifacetted, Object Oriented Modeling in the Transportation Domain p. 341
EaSy-Sim: A Tool Environment for the Design of Complex, Real-Time Systems p. 358
DEVS-Based Endomorphic Agents: Control Through Deliberative and Reactive Planning p. 386

Software Processes, Work Flow and Work Cell Design - Separated by a Common Paradigm p. 403

High-Performance Parallel Computing for Analyzing Urban Air Pollution p. 417
Performance Analysis of a Dual Robot System Using a Geometric Concurrency Model p. 423
Computer Aided Rule Extraction from Examples p. 437
Cast Methods for Generation of Non-Orthogonal Complete Transforms p. 447
Cast System Approach for Visual Inspection p. 459
Finite Dimensional Generalized Baker Dynamical Systems for Cryptographic Applications p. 465
