A [lambda]-to-CL translation for strong normalization p. 1
Typed intermediate languages for shape analysis p. 11
Minimum information code in a pure functional language with data types p. 30
Matching constraints for the lambda calculus of objects p. 46
Coinductive axiomatization of recursive type equality and subtyping p. 63
A simple adequate categorical model for PCF p. 82
Logical reconstruction of bi-domains p. 99
A module calculus for Pure Type Systems p. 112
An inference algorithm for strictness p. 129
Primitive recursion for higher-order abstract syntax p. 147
Eta-expansions in dependent type theory - the calculus of constructions p. 164
Proof nets, garbage, and computations p. 181
Recursion from cyclic sharing: traced monoidal categories and models of cyclic lambda
calculi p. 196
Games and weak-head reduction for classical PCF p. 214
A type theoretical view of Bohm-trees p. 231
Semantic techniques for deriving coinductive characterizations of observational
equivalences for [lambda]-calculi p. 248
Schwichtenberg-style lambda definability is undecidable p. 267
Outermost-fair rewriting p. 284
Pomset logic: a non-commutative extension of classical linear logic p. 300
Computational reflection in the calculus of constructions and its application to
theorem proving p. 319
Names, equations, relations: practical ways to reason about new
p. 336
An axiomatic system of parametricity p. 354
Inhabitation in typed lambda-calculi (a syntactic approach) p. 373
Weak and strong beta normalisations in typed [lambda]-calculi p. 390
Author Index p. 405
