Computer Science and Its Potential

The might of formulas and their limits p. 1

Hardware - software: an equivalence and a contradiction p. 9

Defining discipline p. 21

Social Implications of Computer Science

Computer science as cultural development p. 37

Towards adjusting informatics education to information era p. 49

Informatics and society: a curriculum for distance education p. 69

Theory of Formal Languages and Automata

Syntactic and semantic aspects of parallelism p. 79

Unique fixpoints in complete lattices with applications to formal languages and semantics p. 107

On abstract families of languages, power series, and elements p. 117

Are there formal languages complete for SymSPACE (log n)? p. 125

On twist-closed trios: a new morphic characterization of r.e. sets p. 135

An automata approach to some problems on context-free grammars p. 143

Structures and Complexity Theory

On aperiodic sets of Wang tiles p. 153

Closure under complementation of logspace complexity classes - a survey p. 163

A relation between sparse and printable sets in NSPACE (log n) p. 177

A foundation for computable analysis p. 185

A computer scientist's view of life, the universe, and everything p. 201

Calendars and chronologies p. 209

Petri Nets

A uniform approach to Petri Nets p. 219

Observing partial order runs of Petri Nets p. 233

Representation theorems for Petri Nets p. 239

A remark to trace equations p. 251

Verification of distributed algorithms with algebraic Petri Nets p. 261

A short story on action refinement p. 271

Systems Analysis and Distributed Systems

Interactive and reactive systems: states, observations, experiments, input, output, nondeterminism, compositionality, and all that p. 279

Discrete time analysis of a state dependent tandem with different customer types p. 287

How distributed algorithms play the token game p. 297

The asynchronous stack revisited: rounds set the twilight reeling p. 307

Online scheduling of continuous media streams p. 313

Software Engineering and Verification

Contribution to Goodenough's and Gerhart's theory of software testing and verification: relation between strong compiler test and compiler implementation verification p. 321

On the arrangement complexity of uniform trees p. 337

A relational-functional integration for declarative programming p. 351
Cognition and Artificial Intelligence

Inside and outside the Chinese Room p. 359
Abstract structures in spatial cognition p. 369
Spatial and temporal structures in cognitive processes p. 379

Knowledge Representation and Reasoning

Qualitative vs. fuzzy representations of spatial distance p. 389
What's a part? On formalizing part-whole relations p. 399
SPOCK: a feasibility study on the completeness of parts lists p. 407
Decision support systems with adaptive reasoning strategies p. 417

Machine Learning

Knowledge discovery in databases - an inductive logic programming approach p. 429
The composition heuristic p. 437
The job assignment problem: a study in parallel and distributed machine learning p. 445
Self-improving behavior arbitration p. 455

Neural Networks and Robotics

Neural networks for manipulator path planning p. 465
Path planning using a subgoal graph p. 473
A nonlinear Markovian characterization of time series using neural networks p. 481

Language and Information Systems

Feature-based perception of semantic concepts p. 489
Automatic detection of thesaurus relations for information retrieval applications p. 499

InfoSphere-V: a new approach to 3D-visualization of information p. 507

Author Index p. 515
