Invited Lectures
On the Aesthetics of Diagrams p. 1
Generalising monads p. 6
A proof rule for control loops p. 7

Contributed Lectures
Relation-algebraic derivation of spanning tree algorithms p. 23
An application of program derivation techniques to 18th-century mathematics p. 44
Nested datatypes p. 52
An approach to object-orientation in action systems p. 68
Layered graph traversals and Hamiltonian path problems - An algebraic approach: p. 96
A unifying framework for correct program construction p. 122
Computation calculus { Bridging a formalization gap p. 151
An elementary derivation of the alternating bit protocol p. 175
A set-theoretic model for real-time specification and reasoning p. 188
Polytypic downwards accumulations p. 207
Formal derivation of a loadable asynchronous counter p. 234
A semantic approach to secure information flow p. 254
Slack elasticity in concurrent computing p. 272
Beyond Fun: Order and membership in polytypic imperative programming p. 286
Convergence of program transformers in the metric space of trees p. 315
Realizability of monotone coinductive definitions and its application to program synthesis p. 338
Calculating a round-robin scheduler p. 365
