Pendulum with torsion and gravity  
Model equation for the pendulum chain  
Fluxons in Josephson Transmission Lines  
The Josephson effect in a short junction  
The small Josephson junction  
The long Josephson junction as a transmission line  
Dissipative effects  
Experimental observations of fluxons  
Indirect observation  
Direct observation  
Lattice effects  
Josephson equations  
Solitons in Optical Fibers  
Optical-fiber characteristics  
Linear dispersive effects  
Nonlinear effects  
Effect of losses  
Wave-envelope propagation  
Bright and dark solitons  
Bright solitons  
Dark solitons  
Experiments on optical solitons  
Perturbations and soliton communications  
Effect of losses  
Soliton communications  
Modulational instability of coupled waves  
A look at quantum-optical solitons  
Some other kinds of optical solitons: spatial solitons  
Electromagnetic equations in a nonlinear medium  
The Soliton Concept in Lattice Dynamics  
The one-dimensional lattice in the continuum approximation  
The quasi-continuum approximation for the monatomic lattice  
The Toda lattice  
Envelope solitons and localized modes  
The one-dimensional lattice with transverse nonlinear modes  
Motion of dislocations in a one-dimensional crystal  
The one-dimensional lattice model for structural phase transitions  
The order-disorder transition  
The displacive transition  
Kink-soliton solutions for generalized on-site potentials  
A lattice model with an exact kink-soliton solution
Energy localization in nonlinear lattices p. 250
Self-trapped states: polaron and conformon p. 250
Intrinsic localized modes or discrete breathers p. 251
Observation of discrete breathers p. 253
Discrete pendulum chains p. 253
Mechanical chain with torsion and gravity p. 254
A chain of magnetic pendulums p. 256
Solutions for transverse displacements p. 257
Kink-soliton or domain-wall solutions p. 259
Construction of a double-well potential p. 260
A Look at Some Remarkable Mathematical Techniques p. 262
Lax equations and the inverse scattering transform method p. 262
The Fourier-transform method for linear equations p. 263
The Lax pair for nonlinear evolution equations p. 264
The KdV equation and the spectral problem p. 266
Time evolution of the scattering data p. 267
Discrete eigenvalues p. 267
Continuous spectrum p. 269
The inverse scattering problem p. 270
Discrete spectrum only: soliton solution p. 271
Response of the KdV model to an initial disturbance p. 273
The delta function potential p. 273
The rectangular potential well p. 274
The sech-squared potential well p. 274
The inverse scattering transform for the NLS equation p. 275
The Hirota method for the KdV equation p. 277
The Hirota method for the NLS equation p. 280
Diffusive solitons p. 284
Combined effects of dissipation and nonlinearity p. 285
A diffusive electrical transmission line p. 285
Linear diffusive waves p. 287
Kink-shaped diffusive solitons p. 288
Experiments on electrical diffusive solitons p. 290
Reaction diffusion processes p. 291
Reaction diffusion equations p. 291
A chemical model with reaction diffusion p. 293
An electrical lattice with reaction diffusion p. 296
Experiments with an electrical lattice p. 298
A mechanical analog with diffusive solitons p. 299
Chain with flexion and gravity p. 299
Experimental chain p. 300
