Efficient H.264/AVC video encoder where pattern is used as extra mode for wide range of video coding

Performance enhancement of error resilient entropy coding on block based bitstream of SPIHT

FIDP : a novel architecture for lifting-based 2D DWT in JPEG2000

Analysis of monotonic responsive functions for congestion control

A computational estimate of the physical effort in human poses

A matching-based approach for human motion analysis

Face recognition using kernel uncorrelated discriminant analysis

Recognition of SAR occluded targets using SVM

Discovery of image versions in large collections

User-friendly image sharing in multimedia database using polynomials with different primes

Accelerating non-photorealistic video effects using compressed domain processing

A color image hiding scheme based on SMVQ and modulo operator

Computer interface to use eye and mouse movement

Advanced agent-delegated route optimization protocol for efficient multimedia services at low-battery devices

A study on key distribution and ID registration in the AAA system for ubiquitous multimedia environments

A distributed broadcast algorithm for wireless mobile ad hoc networks

Dynamic MAP selection scheme in HMIPv6 network

A new fingerprinting codes for multimedia contents

Content and location addressable overlay network for wireless multimedia communication

A centralized-abstraction and replicated-view architecture running on ubiquitous networks for collaborative multimedia distance education services

Asymmetric link dynamic routing algorithm for ubiquitous multimedia services

Building detection in augmented reality based navigation system

Local authentication scheme based on AAA in mobile IPv6 networks

Handover-specific optimization for IEEE 802.16e sleep mode

An improvement of the processing delay for the G.723.1 vocoder

Functional architecture of performance measurement system based on grid monitoring architecture

Adaptive synchronization scheme using terminal buffering in mobile multimedia networks

Educational information system using two phase feature extract in u-learning environment

Gradient method for the estimate of travel demand using traffic counts on the large scale network

A new distortion correction method for the maps of public land of Korea

Establishment of car following theory based on fuzzy-based sensitivity parameters

Development of model for highway design consistency evaluation with artificial neural network

Conversion mechanism for MPEG-4 contents services on Web environment
P2P multimedia sharing over MANET
A hybrid MAC protocol based on implicit token and CSMA/CA for wireless network
The vehicle location tracking system using wireless network
A representation of Korean syllable characters defined in Hunminjeongeum
A study on the accelerator for efficient distribution of the multimedia content
A study on analysis of the Web-object reference characteristics on the Web system
Design and performance analysis of the Web caching algorithm for performance improvement of the response speed
Induction and implementation of security requirements in each system block
TD-CDMA systems using turbo code for mobile multimedia services
Textual communication in virtual environments for real world interaction
Managing transformations and events in networked virtual environments
Scalable vector graphics pattern P2P-service for enhanced barrier-free Web applications
