Invited Contributions

Software Product Families: Towards Compositionality  p. 1

Contract-Driven Development  p. 11

Evolution and Agents

EQ-Mine: Predicting Short-Term Defects for Software Evolution  p. 12
An Approach to Software Evolution Based on Semantic Change  p. 27
A Simulation-Oriented Formalization for a Psychological Theory  p. 42

Model Driven Development

Integrating Performance and Reliability Analysis in a Non-Functional MDA Framework  p. 57

Information Preserving Bidirectional Model Transformations  p. 72
Activity-Driven Synthesis of State Machines  p. 87
Flexible and Extensible Notations for Modeling Languages  p. 102

Tool Demonstrations

Declared Type Generalization Checker: An Eclipse Plug-In for Systematic Programming with More General Types  p. 117
S2A: A Compiler for Multi-modal UML Sequence Diagrams  p. 121

Distributed Systems

Scenario-Driven Dynamic Analysis of Distributed Architectures  p. 125
Enforcing Architecture and Deployment Constraints of Distributed Component-Based Software  p. 140
A Family of Distributed Deadlock Avoidance Protocols and Their Reachable State Spacesp. 155

Specification

Precise Specification of Use Case Scenarios  p. 170
Joint Structural and Temporal Property Specification Using Timed Story Scenario Diagrams  p. 185
SDL Profiles - Formal Semantics and Tool Support  p. 200

Services

A Service Composition Construct to Support Iterative Development  p. 230
Correlation Patterns in Service-Oriented Architectures  p. 245
Dynamic Characterization of Web Application Interfaces  p. 260

Testing

A Prioritization Approach for Software Test Cases Based on Bayesian Networks  p. 276
Redundancy Based Test-Suite Reduction  p. 291
Testing Scenario-Based Models  p. 306

Analysis

Practical Reasoning About Invocations and Implementations of Pure Methods  p. 336
Finding Environment Guarantees  p. 352
Ensuring Consistency Within Distributed Graph Transformation Systems  p. 368
