Papers from Invited Talks
Design Choices in a Compiler Course or How to Make Undergraduates Love Formal Notation

Improved Memory-Access Analysis for x86 Executables p. 16

Analyses and Transformations
A System for Generating Static Analyzers for Machine Instructions p. 36
IDE Dataflow Analysis in the Presence of Large Object-Oriented Libraries p. 53
An Adaptive Strategy for Inline Substitution p. 69
Automatic Transformation of Bit-Level C Code to Support Multiple Equivalent Data Layouts p. 85

Compiling for Parallel Architectures
Control Flow Emulation on Tiled SIMD Architectures p. 100
Generating SIMD Vectorized Permutations p. 116
Automatic Transformations for Communication-Minimized Parallelization and Locality Optimization in the Polyhedral Model p. 132

Runtime Techniques and Tools
How to Do a Million Watchpoints: Efficient Debugging Using Dynamic Instrumentation p. 147

Compiler-Guaranteed Safety in Code-Copying Virtual Machines p. 163
Hardware JIT Compilation for Off-the-Shelf Dynamically Reconfigurable FPGAs p. 178
Visualization of Program Dependence Graphs p. 193

Analyses
On the Relative Completeness of Bytecode Analysis Versus Source Code Analysis p. 197
Efficiency, Precision, Simplicity, and Generality in Interprocedural Data Flow Analysis: Resurrecting the Classical Call Strings Method p. 213
Java Bytecode Verification for @NonNull Types p. 229
Efficient Context-Sensitive Shape Analysis with Graph Based Heap Models p. 245

Atomicity and Transactions
Conca: Concurrent Objects with Quantized Atomicity p. 260
Keep Off the Grass: Locking the Right Path for Atomicity p. 276
Supporting Legacy Binary Code in a Software Transaction Compiler with Dynamic Binary Translation and Optimization p. 291

Author Index p. 307
