# Introduction

Computer Science and Fine Arts  
Why Use Computers for Arts?  
Computer as an Art Tool  
Computer as an Exceptional Art Tool  
Computers as Mind-talkers  
Digital Arts  
What Are Digital Arts?  
Manual or Automatic Art Creation  
Three Elements of Digital Arts  
Classification of the Book Chapters  
Examples of Digital Arts  
Digital Film  
Digital Painting  
Computer Music  
Digital Sculpture  
Computer Dance  
Computer Puppetry  
Computer Calligraphy  
Why Digital Arts Are Computationally Challenging?  
Lack of Semantic Understanding  
The Versatile Nature of Art  
Aesthetic Evaluation and Feedback  
Inhomogeneity between the Two Types of Intelligence  
References  

# Computer Science in Painting: A Brief Survey

Introduction  
Automatic Generation of Paintings and Drawings from Photographs  
Early Pioneering Work  
Representative Recent Work  
Generating Paintings via Human-computer Interaction  
Automatic Generation of Painterly Rendering Animation from Videos  
Interactive Generation of Painterly Rendering Images  
Automatic Generation of Painterly Rendering from 3D Models  
Automatic Generation of Illustrations and Line Drawings from 3D Models  
Generating Painterly Rendering Animations from 3D Models  
Domain Specific Special-purpose Painterly Rendition Generation  
Efficient Painterly Rendition Generation  
Special Support for Digital Painting  
Hardware Support for Digital Painting
Multiresolutional Painting
