New Earth Observation Missions

Overview on CNES Micro Satellites Missions: In Flight, Under Development and Next p. 3

Small Earth Observing Satellites Flying with Large Satellites in the A-Train p. 19
INTAµSat-1 First Earth Observation Mission p. 29
VENµS (Vegetation and Environment Monitoring on a New Micro Satellite) p. 47
The "Ulingo" Mid-Low Latitudes Observation (MILO) Mission p. 67
The Italian Precursor of an Operational Hyperspectral Imaging Mission p. 73

Earth Environment Missions

Space System "Radiomet" for GLONASS/GPS Navigation Signal Radio Occupation Monitoring of Lower Atmosphere and Ionosphere Based on Super-Small Satellites p. 85

The Study of Electromagnetic Parameters of Space Weather, Micro-Satellite "Chibis-M" p. 95
SEPSAT - A Nanosatellite to Observe Parameters of Space Weather p. 103
Small Satellite Constellations for Measurements of the Near-Earth Space Environment p. 113

Distributed Space Systems

Satellite Formation for a Next Generation Gravimetry Mission p. 125
EO Small Satellite Missions and Formation Flying p. 135
Relative Trajectory Design for Bistatic SAR Missions p. 145
Conceptual Design of the FAST-D Formation Flying Spacecraft p. 155
Earth Observation Using Japanese/Canadian Formation Flying Nanosatellites p. 165
A Bi/Multi-Static Microsatellite SAR Constellation p. 175

University Satellites

SPRITE-SAT: A University Small Satellite for Observation of High-Altitude Luminous Events p. 197
SwissCube: The First Entirely-Built Swiss Student Satellite with an Earth Observation Payload p. 207
German Russian Education Satellite-Mission Outline and Objectives p. 215
University Microsatellites Equipped with an Optical System for Space Debris Monitoring p. 223
A First-MOVE in Satellite Development at the TU-München p. 235
Design of a Small Educational Satellite for the Italian High School Students; The EduSAT Project p. 247
Testing of Critical Pico-Satellite Systems on the Sounding Rocket Rexus-4 p. 257
Laboratory Facility for Simulation and Verification of Formation Motion Control Algorithms p. 267
Asynchronous Parallel Reactive System for Intelligent Small Satellite on-Board Computing Systems p. 279
NanoSiGN - Nanosatellite for scientific interpretation of GNSS dual-frequency signals in the low Earth orbit p. 289

Instruments and Technologies

The Vegetation Instrument for the PROBA-V Mission p. 301
Software Defined LFM CW SAR Receiver for Microsatellites p. 311
PhytoMapper - Compact Hyperspectral Wide Field of View Instrument p. 321
Development of Spaceborne Small Hyperspectral sensor HSC-III for Micro Satellite p. 331
Towards a Miniaturized Photon Counting Laser Altimeter and Stereoscopic Camera Instrument Suite for Microsatellites p. 341
A Plan of Spaceborne ISAR Satellite Imaging System Aiming at Space Objects p. 351
Increasing the Data Volume Returned from Small Satellites p. 361
Integrated Design Based Plug-and-Play Small SAR Satellite Project p. 371

Attitude Control Systems
Star Sensor Development Based on the TUBSAT Experience p. 379
Small Sensors Big Choices p. 391
Robust and Fault Tolerant AOCS of the TET Satellite p. 401
Implementation of the T p. 411
A Novel AOCS Cold-Gas Micro-Propulsion System Design and Applications to Micro and Nano Satellites p. 425

Navigation
Navigation Needs for ESA's Earth Observation Missions p. 439
Benefits of Galileo for Future Satellite Missions p. 449
GPS-Based Relative Navigation in Earth Observation Missions Relying on Cooperative Satellites p. 467

Index p. 477
