Invited Talks

Building Blocks for Mobile Manipulation (Abstract)  p. 1
Natural Human-Robot Interaction (Abstract)  p. 2
Robots and the Human (Abstract)  p. 3
The Modelica Object-Oriented Equation-Based Language and Its OpenModelica Environment with MetaModeling, Interoperability, and Parallel Execution  p. 5

Simulation

Blender for Robotics: Integration into the Leuven Paradigm for Robot Task Specification and Human Motion Estimation  p. 15
Simulating the C2SM 'Fast' Robot  p. 26
Extending Open Dynamics Engine for Robotics Simulation  p. 38
Virtual Robot Experimentation Platform V-REP: A Versatile 3D Robot Simulator  p. 51

High Fidelity Sensor Simulations for the Virtual Autonomous Navigation Environment  p. 75

GPS/Galileo Testbed Using a High Precision Optical Positioning System  p. 87
Validating Vision and Robotic Algorithms for Dynamic Real World Environments  p. 97
OpenGRASP: A Toolkit for Robot Grasping Simulation  p. 109
NERD Neurodynamics and Evolutionary Robotics Development Kit  p. 121
Simulation and Evaluation of Mixed-Mode Environments: Towards Higher Quality of Simulations  p. 133
Evaluating a Physics Engine as an Ingredient for Physical Reasoning  p. 144
Simulating Vehicle Kinematics with SimVis3D and Newton  p. 156

Programming

Coordinating Software Components in a Component-Based Architecture for Robotics  p. 168
Native Robot Software Framework Inter-operation  p. 168
Run-Time Management of Component-Based Robot Software from a Command Line  p. 192
Modelling Behaviour Requirements for Automatic Interpretation, Simulation and Deployment  p. 204
Implementing Automated Robot Task Planning and Execution Based on Description Logic KB  p. 217

RobustHX-The Robust Middleware Library for Hexor Robots  p. 241
RoboComp: A Tool-Based Robotics Framework  p. 251
Improving a Robotics Framework with Real-Time and High-Performance Features  p. 263
Implementation of Distributed Production System for Heterogeneous Multiprocessor Robotic Systems  p. 275
Robot Programming by Demonstration  p. 288
Design Principles of the Component-Based Robot Software Framework Fawkes  p. 300
Handling Hardware Heterogeneity through Rich Interfaces in a Component Model for Autonomous Robotics  p. 312
Design Abstraction and Processes in Robotics: From Code-Driven to Model-Driven Engineering  p. 324
