Invited Lectures and Tutorials

The Logic and Topology of Non-locality and Contextuality

A Framework for Multiscale and Multiscience Modeling and Numerical Simulations

Unconventional Optimizer Development

A Formal Framework for Bioprocesses in Living Cells

Quantum Information - A Tutorial

Weighted Finite Automata: Computing with Different Topologies

Tutorial on Cellular Automata

Membrane Computing at Twelve Years (Back to Turku)

Membrane Computing (Tutorial)

Regular Contributions

Von Neumann Normalisation and Symptoms of Randomness: An Application to Sequences of Quantum Random Bits

Robustness of Cellular Automata in the Light of Asynchronous Information Transmission

Hidden Variables Simulating Quantum Contextuality Increasingly Violate the Holevo Bound

Can Anything from Noether's Theorem Be Salvaged for Discrete Dynamical Systems?

On Normal Forms for Networks of Evolutionary Processors

Geometrical Accumulations and Computably Enumerable Real Numbers

Heterotic Computing

A Formal Approach to Unconditional Security Proofs for Quantum Key Distribution

Geometric Computations by Broadcasting Automata on the Integer Grid

Computations with Uncertain Time Constraints: Effects on Parallelism and Universality

BFS Solution for Disjoint Paths in P Systems

The Key Elements of Logic Design in Ternary Quantum-Dot Cellular Automata

A Universal Flying Amorphous Computer

Computation with Narrow CTCs

Extended Watson-Crick L Systems with Regular Trigger Languages

Computing with Planar Toppling Domino Arrangements

Increasing Fault-Tolerance in Cellular Automata-Based Systems
