Preface

Therapeutic Concepts

The Bobath Concept - Evolution and Application p. 1

Vojta: A Neurophysiological Treatment p. 7

Sensory Integration Theory p. 16

Motor Control Models Underlying Neurologic Rehabilitation of Posture in Children p. 21

The Nature of Skill Acquisition: Therapeutic Implications for Children with Movement Disorders p. 31

CNS Development after Early Brain Damage (Diagnosis and Treatment)

What Are the Principles of Motor Development? p. 41

Neural and Neurobehavioral Changes Associated with Perinatal Brain Damage p. 50

Morphology of Brain Impairment in Preterm and Term Infants p. 57

CNS Morbidity in Preterm Infants p. 65

Early Motor Assessment in Brain-Damaged Preterm Infants p. 72

Early Detection of Cerebral Motor Disorders p. 80

Early Diagnosis of Cerebral Palsy: Vojta Approach p. 86

Effects of Physical Therapy and Infant Stimulation p. 91

Discussion Section II p. 98

Manual Actions: Motor Mechanisms and Perceptual Processes

Neural Control of Manipulation and Grasping p. 107

Development of Manual Actions from a Perceptual Perspective p. 113

Roles of Proprioceptive Input in Control of Reaching Movements p. 124

Development of Anticipatory Control Mechanisms for Manipulation p. 130

Perceptual Determinants of Precise Manual Pointing in Children with Motor Impairments p. 137

Manipulative Forces in Grasping of Children with Cerebral Palsy p. 144

Discussion Section III p. 151

Control of Locomotion, Posture and Spasticity

Neural Control of Innate Behavior p. 159

Development of Locomotion from a Dynamic Systems Approach p. 169

A Neural Control Model for Human Locomotion Development: Implications for Therapy p. 174

Normal and Impaired Development of Children's Gait p. 182

Pathophysiological Profile of Gait in Children with Cerebral Palsy p. 186

Postural Control: Acquisition and Integration during Development p. 199

Role of the Vestibular System in Motor Development: Theoretical and Clinical Issues p. 209

Spasticity Control in the Therapy of Cerebral Palsy p. 217

Spasticity: Exaggerated Reflexes or Movement Disorder? p. 225

New Experimental Approaches in the Treatment of Spastic Gait Disorders p. 234

Dorsal Rhizotomy as a Treatment for Improving Function in Children with Cerebral Palsy p. 247

Discussion Section IV p. 255
