Preface p. 19
The use of Ground-Probing Radar within a digital environment on archaeological sites p. 21
Recreating vanished mound groups in the upper Mississippi river valley (USA): integrating historic documents, CADD, and photogrammetric mapping p. 33
Automated archaeological feature extraction from digital aerial photographs p. 45
Image processing applications in archaeology: classification systems of archaeological sites in the landscape p. 53
Graphic representation methods in archaeological prospection in Czechoslovakia p. 63
Practical experience in creating digital terrain models p. 67
An investigation into the use of colour in the analysis of aerial photographs p. 75
Arkeoplan: a new tool for the archaeologist p. 81
Automatic recognition and classification of archaeological charcoals p. 85
Spatial statistics and GIS: an integrated approach p. 91
Cartographic modelling in a cell-based GIS p. 105
Multiple viewshed analysis using GIS and its archaeological application: a case study in northern Mull p. 125
Going over old ground: GIS, archaeological theory and the act of perception p. 133
The Archaeological implications of a computerised integrated National Heritage Information System p. 139
GIS in a landscape archaeology context p. 151
Bridging the urban-rural gap: GIS and the York Environ Project p. 159
From model to machine: procurement and implementation of Geographical Information Systems for County Sites and Monuments Records p. 167
Gardermoen Project - Use of a GIS system in antiquities registration and research p. 177
JADIS (Jordan Antiquities Database and Information System): An example of national archaeological inventory and GIS applications p. 183
GIS and Archaeology in Jordan p. 189
Planning for inter- and intra-site data management and interpretation p. 195
The excavation archive: an integrated system for the management of cartographic and alphanumeric data p. 205
Syntheses in object oriented analysis p. 213
MuseumsIndex - An object oriented approach to the design and implementation of a data driven Data Base Management System p. 221
European archaeological databases: problems and prospects p. 229
Computer-based techniques for the representation of automatic problem-solving in archaeology p. 239
Contrasting models of Upper Palaeolithic social dynamics: a distributed artificial intelligence approach p. 251
The potentials of hybrid neural network models for archaeofaunal ageing and interpretation p. 263
What lies behind the quantification debate? p. 273
Diversity Indices and Archaeology p. 279
Detection of kinship structures in prehistoric burial sites based on odontological traits p. 287
The provenancing of archaeological ceramics: a Bayesian approach
A Cappadocian Tablet Problem
A parametric approach to seriation
Colour and graphic display aids for correspondence analysis
Pre-processing of archaeological data
Gold bracteates and correspondence analysis
Seriation of Iron Age settlement sites in NW Bohemia - system of databases, CAAF program
Computer clustering in the analysis of non-morphological attributes of pottery sherds: two examples from Poland
Quantitative methods for spatial analysis at rockshelters: the case of Klithi
Coin hoard formation revisited...
Mathematical models for the reconstruction of prehistoric settlement patterns: Central German examples
Analysis of pottery from Wroxeter Roman city
Good or bad? Raw material procurement criteria in the Carpathian Basin. A diachronic approach
Reconstruction of Japanese ancient tombs and villages
Reconstruction of the 8th-century Imperial Palace of the Heijo capital at Nara in Japan
Experiments with user-friendly volume visualisation and iconographic display methods to explore core data
Hypermedia and Archaeological Publication: The Wadi Ziqlab Project
The world of the Vikings: An interactive video project
A high resolution digital imaging system for the photographic archive at the National Railway Museum, York
The Roman conquest of Britain: a computer-based educational package
