

Introduction	
Preface	
Compaction of soil and other granular material - interactions	p. 3
High embankments instead of bridges and bridge foundations in embankments	p. 13
Compaction behaviour and depth effect of the Polygon-Drum	p. 27
Developments in compaction technology	p. 37
The importance of optimum compaction of soil and other granular material	p. 47
Impacts on geotechnical engineering of several recent findings from laboratory stress-strain tests on Geomaterials	p. 69
Freezing-thawing behaviour of soil and other granular material - influence of compaction	p. 141
Soil mechanics in routine and advanced pavement and rail track rational design	p. 165
Dynamic soil stiffness as quality criterion for soil compaction	p. 189
Characteristics of embankment vibrations due to high-speed train loading and some aspects of the design standard for high-speed links in Japan	p. 203
True-to-scale in situ tests determining dynamic performance of earthworks under high speed train loading	p. 213
Modelling, monitoring and controlling in behaviour of embankments under high speed train loads	p. 225
Low embankments on soft soil for highways and high-speed trains	p. 239
Frost heave design of embankments for high-speed railways	p. 259
Notes on specifications for railway embankments in high speed lines	p. 263
Geotechnics of rail track structures	p. 271
Author Index	p. 289
