Vehicle suspension optimization for heavy vehicle on deformable ground  p. 3
Bridge-friendly truck suspension  p. 13
The effect of nonlinear suspension kinematics on the simulated pitching and rolling dynamic behavior of cars  p. 23
Research on high curving performance trucks - concept and basic characteristics of active-bogie-steering truck-  p. 33
Design and experimental implementation of an active stability system for a high speed bogie  p. 43
Curving and stability optimization of locomotive bogies using interconnected wheelsets  p. 53
Kinematic cross-linking in automotive suspension systems  p. 63
Analysis of large vehicle dynamics for improving roll stability  p. 73
An analysis of pitch and bounce motion, requiring high performance of ride comfort  p. 83
Directional stability of buses under influence of crosswind gusts  p. 93
State estimation of vehicle handling dynamics using non-linear robust extended adaptive kalman filter  p. 103
Effect of asymmetric brake shoe force application on wagon curving performance  p. 113
On the interaction and integration of wheelset control and traction system  p. 123
Equivalent conicity and curve radius influence on dynamical performance of unconventional bogies. Comparison analysis  p. 133
Analysis of active suspension systems with hydraulic actuators  p. 143
Control of vehicle suspension using neural network  p. 153
Ride comfort enhancement considering car body aerodynamics using actively controlled spoilers  p. 162
Possibilities and limitations with distributed damping in heavy vehicles  p. 172
Neuromuscular dynamics and the vehicle steering task  p. 182
Proposal on variable gear-ratio characteristics of cable-type EPS with active torque control in over-steer situation  p. 192
A study on the relationship between vehicle behavior and steering wheel torque on steer-by-wire vehicle  p. 202
The dynamics of the three-piece-freight truck  p. 212
Analysis and method of the analysis of non-linear lateral stability of railway vehicles in curved track  p. 222
Importance of track modeling to the determination of the critical speed of wagons  p. 232
Simulation of a railway vehicle's running behaviour : how elastic wheelsets influence the simulation results  p. 242
Human-in-the-loop optimization of vehicle dynamics control with rollover prevention  p. 252
Human-vehicle system modeling - focus on heuristic modelling of driver-operator reactions and mechatronic suspensions  p. 262
Driver perception sensitivity to changes in vehicle response  p. 272
A study of active steering strategies for railway bogie  p. 282
Effect of bogie center plate lubrication on vehicle curving and lateral stability  p. 292
Nausea and comfort in tilting trains : possible regression models for nausea  p. 302
Lateral driving assistance using robust control and embedded driver-vehicle-road model
A driver model for a truck-semitrailer combination
A study on a driver model for longitudinal control on heavy duty vehicle
A semi-empirical, three-dimensional, tyre model for rolling over arbitrary road unevennesses
Investigation of steady-state tyre force and moment generation under combined longitudinal and lateral slip conditions
The development of the tire side force model considering the dependence of surface temperature of tire
Modelling and validation of steering system response to road and driver induced forces
Bilateral driver model for steer-by-wire controller design
On-center steel feel evaluation based on non-linear vibration analytical method
Analytical method for modeling driver in vehicle directional control
Driver independent road curve charaterisation
Estimation of tire grip margin using electric power steering system
Measurement and analysis of interaction between track and road - analysis of forward slip phenomenon
Modelling freight wagon dynamics
Innovative system dynamics analyses of rail vehicles
Computational bifurcation analysis of mechanical systems with applications to railway vehicles
Fault-detection-and-isolation system for a railway vehicle bogie
Stability and performance studies of driver-vehicle systems with electronic chassis control
Side slip control of small-scale electric vehicle by DYC
Driving dynamics for hybrid electric vehicles considering handling and control architecture
Experiment and analysis for improvement of curving performance with friction control between wheel and rail
Optimisation of railway wheel profiles using a genetic algorithm
Investigation of vehicle dynamic influence on rolling contact fatigue on UK railways
Multi-objective robust design of the suspension system of road vehicles
Handling and ride comfort optimisation of an intercity bus
A robust design approach for nonlinear vehicle dynamics controller based on quality engineering
Application of non-linear dynamics to instability phenomena in motorcycles
Practical string stability for longitudinal control of automated vehicles
The dynamics of a railway freight wagon wheelset with dry friction damping in the suspension
Experimental and numerical modal analyses of a loco wheelset
Results of investigations of railway vehicles properties with the new design of wheelsets using the refined theoretical models and field tests
Mechanisms of high frequency force generation in hydraulic automotive dampers
Controllable vibration of the car body using magnetorheological fluid damper p. 627
Study on electromagnetic damper for automobiles with nonlinear damping force characteristics p. 637
Electric-power recovery for the mechanical damper in a vehicle-suspension system using artificial intelligent control p. 647
Analytical study on effects of form in transition curve p. 657
Dynamic train/track interaction including model for track settlement evolvement p. 667
Numerical simulation and field experiment of high-speed train-track-bridge system dynamics p. 677
Multiple pantograph operation-effects of section overlaps p. 687
Pantograph-catenary dynamic interaction in the medium-high frequency range p. 697
A numerical-experimental approach to evaluate the aerodynamic effects on rail vehicle dynamics p. 707
Interaction between vehicle vibration and aerodynamic force on high-speed train running in tunnel p. 717
Fatigue relevant road surface statistics p. 724
Rough road simulation with tire model RMOD-K and Ftire p. 734
Identification of transient road obstacle distributions and their impact on vehicle durability and driver comfort p. 744
Analysis of the improvement of running performance by secondary suspension p. 754
Ride quality improvement of AGT vehicle by active secondary suspension p. 764
Dynamic response analysis of railway passenger car with flexible carbody model based on semi-active suspensions p. 774
Research on detection of braking reactions in emergency situations p. 784
Non-linear dynamic techniques v. equivalent conicity methods for rail vehicle stability assessment p. 791
