Preface
Organization of the symposium
US National Committee for Rock Mechanics
American Rock Mechanics Association (ARMA)
Previous symposia proceedings
Basic Research Award
Applied Research Award
Case History Award
Vitae of award-winning authors
The Schlumberger Lecture Award
Panel discussion preview
Block theory and its application  p. 3
Recent rock mechanics developments in the petroleum industry  p. 17
Application of DDA to block-in-matrix materials  p. 33
Sliding stability of prismatic blocks  p. 39
Modification of the DDA for elasto-plastic analysis with illustrative generic problems  p. 45
Joint shear displacement-dilation analysis using in-situ opposing profiles  p. 51
Geomechanical investigations and analyses of the large rock sculptures at Mount Rushmore and Stone Mountain  p. 57
Rock slopes: Some construction case histories  p. 65
Application of block theory to rock slope stability studies  p. 71
Development of a highwall monitoring system using time domain reflectometry  p. 79
Analysis of rock falls in the Yosemite Valley, California  p. 85
Slope stability assessment using slope mass rating technique  p. 91
Interpretation of direct shear tests on rock joints  p. 99
Seismic analysis of the 25 Stone Buddhas Group at Hakone, Japan  p. 107
Stability of keyblocks under self-weight and surface forces  p. 113
The effects of stress path on compressibilities of coal  p. 121
Behavior of natural and remolded Antler Sandstone: Sample preparation and grain crushing aspects  p. 127
Creep crack growth in shale  p. 135
Fracture recognition in digital imagery  p. 141
Determination of rock fracture toughness under creep and fatigue  p. 147
Effects of stress cycles on static and dynamic Young's moduli in Castlegate sandstone  p. 155
Investigation of interface wave propagation along planar fractures in sedimentary rocks  p. 161
The effect of cementation on the static and dynamic mechanical properties of the Rotliegendes sandstone  p. 169
Equation of state hysteresis and resonant bar measurements on rock  p. 177
Laboratory observation of seismic waves in heterogeneous geomaterials  p. 183
A continuum approach to the development of normal faults  p. 191
Diffusion creep in ice p. 199
Experimental deformation of dry Columbia diabase: Implications for tectonics on Venus p. 207
Stress testing with the micro-hydraulic fracturing technique: Focus on fracture reopening p. 217
In-situ stress and fracture permeability in the Long Valley Caldera p. 225
Hydraulic fracturing stress measurements in an inclined hole in South Carolina and their application to underground cavern design p. 231
The stress state of the earth and the earth’s crust due to the gravitational pull p. 237
In-situ stress determination at great depth by using acoustic emission technique p. 245
Fracture and shatter zone inflow into hard rock tunnels - Case histories p. 253
Groundwater inflow problems in tunneling at west leg interceptor contract 3, Cleveland, Ohio p. 259
Estimating in-situ stresses for the selection of the alignment of unlined pressure tunnels p. 267
Study of the effect of joint geometry parameters on the permeability of jointed rock p. 273
The influence of plastic yielding on breakdown pressure in hydraulic fracturing p. 281
Physical and analytical modeling of induced fractures from horizontal wellbores p. 287
Optimizing hydraulic fracture length to prevent formation failure in oil and gas reservoirs p. 293
Size dependency of Castlegate and Berea sandstone hollow-cylinder strength on the basis of bifurcation theory p. 301
Stability analysis of an inclined borehole in an isotropic poroelastic medium p. 307
Poroelastic solution of an inclined borehole in a transversely isotropic medium p. 313
Observations of borehole breakouts and tensile wall-fractures in deviated boreholes: A technique to constrain in situ stress and rock strength p. 319
A fracture mechanics approach to rock drilling p. 329
Assessing the mechanical response of rock structures subject to water forces p. 335
Wear of the cutting tools of rock excavation machines p. 341
Numerical modeling of normal wedge indentation in rocks p. 349
Resistance parameters of rocklike materials against abrasive water jet cutting p. 355
Thermodynamic method of rock durability p. 363
Developing seismic and strength tests to determine construction stone durability in infrastructure projects p. 367
Durability testing of thin stone p. 373
Case study of an instrumented reinforced pit slope p. 381
The instrumentation and stabilization of a major excavation: Point Marion Lock, Pennsylvania p. 387
Capacity of anchors and anchored foundations in weak rock using seismic refraction surveys and anchor pullout testing for electric transmission lines p. 395
Laboratory testing of fully resin grouted weldgrip fiberglass rockbolts p. 403
Prediction of ground stability through convergence velocity p. 411
Use of block theory in the Elk Creek Tunnel Project p. 417
A new technique for describing the deformation behavior of the rock mass around an underground opening in salt
An empirical approach for predicting ground condition for tunnelling and its practical benefits
Support pressures in powerhouse cavern in weak rocks - A case study
Seismic and global measurements of fault slip and energy release from laboratory experiments
A new empirical failure criterion for rock under polyaxial compressive stresses
Tensile strength of welded Apache Leap tuff: Investigation of scale effects
Modeling fracture initiation and propagation from a pressurized hole: A dislocation-based approach
Effects of micromechanical property variation on fracture processes in simple tension
Microcracking in coarse and fine grain marbles
Constitutive representation of damage healing in WIPP salt
Correlation of theoretical calculations and experimental measurements of damage around a shaft in salt
Consolidation and permeability of crushed WIPP salt in hydrostatic and triaxial compression
A scale model study of seismic response of an underground opening in jointed rock
Variability of the physical properties of tuff at Yucca Mountain, NV
WAVE: A computer program for investigating elastodynamic issues in mining
An integrated seismic-stress-geomechanical analysis of a highly stressed rock mass
Prediction of area instability from mining induced seismicity
Numerical modelling to investigate the effects of blasting in confined rock: Simulation of a field study
Blasting induced fracturing and stress field evolution at fracture tips
Rock fragmentation in bench blasting - A numerical study
Ground subsidence at Mont Belvieu, Texas, 1988 through 1993
Practical solutions to offset the deficiencies and increasing price of mine timber
Stochastic modelling of rock fragment flow in caving mines
Probabilistic risk and reliability evaluation of ground control practices in underground mining: The safety and economic implications
Integrated monitoring and analysis techniques for evaluating longwall panel ground behavior
Fuzzy neural network for chain pillar design in longwall coal mining
Prediction of bump hazards associated with coal mining under competent roofs
Determining the influence of longwall mining on groundwater resources
The effect of drying and re-saturation on the gas permeability of coal
Capillary effects in sedimentary rocks: Application to reservoir water-flooding
Conductive fracture identification using neural networks
Fluid-sediment interactions during carbonate diagenesis with particular reference to time-dependent behaviour
Modeling the effects of longwall mining on the ground water system  p. 639
Stress-dependent permeability measurement of rocks in a triaxial cell  p. 645
A variogram/fractal based new peak shear strength criterion for rock joints  p. 653
Tribological properties of granular filled rock joints  p. 659
Hydromechanical behavior of rock joints: A re-interpretation of published experiments  p. 665
Fuzzy decision model for rock mass failure analysis  p. 675
On natural rock joint profile characterization using self-affine fractal approach  p. 681
Probabilistic assessment of rock mass deformability based on Goodman Jack test results  p. 689
Projection Onto Convex Sets (POCS): A new method for constrained stochastic simulation of rock properties for geotechnical design and fluid flow modeling  p. 695
Observations from Vancouver Island, British Columbia, that may indicate compression-driven mode I fracturing occurs on the geologic scale  p. 703
A comparative study on joint roughness description by fractal, scaling and statistical methods  p. 711
Frictional sliding in layered rock: Preliminary experiments on stacked Lexan plates  p. 717
Development of stochastic models for fracture systems  p. 725
A model of fault propagation in rocks under compression  p. 731
An analysis of laboratory and long-term rock strength using a sliding crack model  p. 741
Using internal state variables for modeling the viscoplastic behavior of rocksalt in the semi-brittle regime  p. 749
Dynamic compaction of salt: Initial demonstration and performance testing  p. 755
The influence of crushed rock salt particle gradation on compaction  p. 761
On the thermoporoelastic properties of fractured reservoir rocks  p. 769
Determination of deformability parameters on overcores in heterogeneous non linear anisotropic rocks  p. 775
Engineering behaviour of certain Himalayan rocks  p. 783
Very long-term loading of roof beams in limestone caves  p. 789
Influence of topography on in-situ stress under a river valley - A case study  p. 795
Hysteresis observed in stress-strain diagrams and its relation to adhesion hysteresis and stick-slip sliding in sedimentary granular rocks  p. 801
Discontinuity network modeling of the rock mass around a tunnel close to the proposed permanent shiplock area of the three gorges dam site in China  p. 807
Modeling induced acoustic velocity anisotropy during triaxial tests of rocks  p. 813
Addressing the effects of material non-linearities on wellbore stresses using stress- and strain-dependent elastic moduli  p. 819
Analysis of progressive behaviour of cut slopes in clay shales exhibiting softening  p. 825
Waste pile stability and debris flow formation  p. 831
Factors affecting the slope stability of Kentucky's abandoned mine lands  p. 837
Impact-Echo: A technique for determining the mechanical properties of rocks  p. 843
Sensitivity tests on rock block size distribution p. 849
Elastic buckling of fractured basalt on the Columbia Plateau, Washington State p. 855
Geostatistical analyses for relating rock joint roughness to shear strength p. 861
Contribution of the acoustic emission analysis to the interpretation of the uniaxial compressive test p. 867
Simulation of fracture in compression using a field-theory model p. 873
Asymmetric borehole breakouts at the URL p. 879
Hydration stress on wellbore stability p. 885
Mechanical mechanism of floor heave and applications of stress relief methods p. 889
Tapercoring method of determining in situ rock stresses p. 895
The water pressure tests and flow in single rock fractures p. 901
The engineering significance of the scale-independence of some Franciscan melanges in California, USA p. 907
Influence of foundation on stability of concrete gravity dams p. 915
Author index p. 921
