Computational and theoretical studies on dynamic fracture mechanics and three-dimensional crack problems

The analysis of stable crack growth with isotropic and kinematic hardening

The discontinuity in quasi-static plastic fields

Fully plastic analysis of mixed mode plane-strain crack problems

Through-the-thickness crack in biaxial stress field

Some theoretical works on fracture mechanics in China

An application of J integral to finite element analysis of stress intensities of mixed mode cracks

On the three dimensional crack growth analysis

A finite element analysis of nonplanar crack growth in a linear elastic and in an elastic-plastic material

Mode III problems of doubly-periodic rhombic and rectangular array of equal cracks in an infinite plate

A computer simulation of ductile behaviour in a high strength steel

The stress strain fields at crack tip and stress intensity factors in Reissner's plate

On the numerical evaluation of C*-integrals for creep fracture analysis

The nonlinear line-spring model for elastic-plastic analysis of surface cracks

The nonlinear line-spring model for surface crack analysis with particular reference to work hardening materials

Evaluation of SIF for a three-dimensional flat crack by variational method

Finite element analysis of mode-I steady crack growth in plane stress

J-integral for surface cracked body

Plastic deformation and hardening characteristics in three-dimension fracture specimens

Non-coplanar crack growth

Some theorems in mathematical theory of nonlinear fracture dynamics

A simple estimation model for a center cracked panel in tension

A comparison of three design methods for estimating values of J and COD applied to a crack with yielded ligament

Characteristics of brittle fracture under general combined modes

Elastic-plastic analyses of stress and strain fields around crack tip

On inclined crack under compressive loading

Power-law anisotropic Hardening effect on mode-III crack growth

An elastic-plastic fracture investigation on stable crack growth for plane stress

The analysis for the corner region and crack tip of plate with transverse shear deformation

Near-tip fields for plane-strain mode-I steady crack growth in linear hardening material with Bauschinger effect

The generalized J-integral of combined modes

Stress-intensity factors for radial cracks around circular holes-method of evaluation and computing graphs

Dynamic emission of dislocations from a crack tip - a computer simulation
Stress concentration and stress intensity factors for elliptic holes and cracks in an infinite plane p. 312
An analysis of non-homogeneous materials by fracture mechanics p. 319
Adhesively bonded and bolted steel joints p. 326
On the $J_{IC}$ concept for the prediction of crack growth initiation in complex structures p. 342
Fracture characterization of pipeline steel p. 352
Fracture mechanics applications in rock mechanics problems p. 366
Some applications of fracture mechanics in China p. 383
Probabilistic fracture mechanics of fatigue crack propagation and its application to damage tolerance design p. 398
The safety of joint components of hoisting device employed in a coal mine shaft p. 404
Application of the equivalent displacement of crack tip to pressure vessel with slant crack p. 411
Residual strength analysis of riveted stiffened panels p. 417
Determination of the critical crack length $a_{IC}$ in turbine discs p. 424
Development of body force method and its application to crack problems p. 431
Negative pressure-fracture strain-temperature diagram p. 438
A fracture mechanics analysis of buried defects in turbine discs p. 444
A new method of calculating fracture parameters for a stiffened panel with a crack - a mixed method p. 450
Fracture toughness and resistance to fatigue crack growth of three vessel steel welded joints with different welding procedures p. 455
Research of fracture mechanics properties of ZGOCr$_{13}$Ni$_{4}$Mo p. 461
Application of boundary element method to stress intensity analysis for surface cracks p. 467
Fracture of journal in hub-arms of helicopters p. 469
Photoelastic stress intensity factor determination for circular-sector cracks p. 476
The fracture-resistant characteristics of medium-strength plates with regard to the initiation, stable and unstable propagation of surface cracks p. 485
An investigation on the nonlinear stress fields near crack tip using photoelastoplastic analysis p. 494
Studies on the procedure for the determination of ductile fracture toughness value $J_{IC}$ using J-R curve at low temperatures p. 501
Drop weight J-R curve testing using the key curve method p. 507
On the blunting line in the $J_{IC}$ test - the comparison of theories and experiments p. 517
Experimental studies of stable crack growth in a single TPB specimen p. 523
An approach to the testing of the dynamic fracture toughness p. 530
Strain-field around crack-tip during crack growth and some observations p. 537
The thickness effect of the CCT specimen p. 544
Elastic-plastic fracture toughness $J_{IC}$ test method recommended in Japan p. 550
Influence of high loading rate on the fracture toughness of steels p. 559
The shape variation of a surface crack subjected to repeated general eccentric tension

p. 575

Crack tip plasticity under mixed mode loading

p. 582

A study on chevron-notched short rod and short bar fracture toughness specimens

p. 589

A simple method for measuring $K_{IIIC}$ of ductile metals and its some applications

p. 596

Application of acoustic emission technique to fracture test

p. 602

Programmed block loading fatigue crack growth in aluminium alloys

p. 609

Initiation of short cracks at notches by fatigue

p. 624

Multiaxial cumulative damage in low cycle fatigue

p. 629

Correlations of fatigue crack growth rate parameters at cryogenic temperatures

p. 635

Computer controlled monitoring of the fatigue crack shape

p. 641

Effects of nominal compressive load on various stages of crack growth

p. 657

Fatigue crack growth under non-proportional loading

p. 666

Fatigue thresholds of a low-alloy steel with shallow semi-elliptical surface crack

p. 672

Shapes and coalescence of surface fatigue cracks

p. 679

Small cracks and multiple crack problems in fatigue

p. 694

Effect of specimen size and configuration on fatigue crack growth behaviour of welded joints

p. 706

Transition from fatigue to ideal cracks

p. 712

Oxide induced fatigue crack closure and near-threshold characteristics in A508-3 steel

p. 718

Study on the distribution rule of fatigue residual strength

p. 724

Near threshold fatigue crack growth in steels - an analysis based on crack tip plastic deformation

p. 730

A simple and direct method for calculating fatigue crack propagation rate using low cycle fatigue properties

p. 749

Size effect in impact tensile fatigue

p. 757

On the role of crack closure in fatigue crack growth

p. 763

Effect of overload ratios on fatigue crack growth behaviour in Ti-6-Al-4V alloy

p. 769

Fatigue crack propagation rate of AISI type 304 stainless steel at 570[degree]C in air

p. 778

Fatigue crack growth in unstress-relieved welded joints under non-stationary narrow-band random loading

p. 784

Low cycle fatigue with hold-periods at high temperature for an iron-based superalloy GH36

p. 790

Correlation between fracture toughness and final fatigue fracture of cast steels at room temperature and -45[degree]C

p. 798

Fatigue propagation of an inclined crack in uniaxial tension stress field

p. 804

Material parameters specifying the delayed retardation phenomenon of fatigue crack growth after a single application of overload

p. 810

Fatigue cavitation at high temperature

p. 816

The characteristics of threshold [actual symbol not reproducible] value for fatigue crack propagation of shallow crack

p. 832

Investigation on LCF crack growth rate at elevated temperature

p. 838
