Foreword

Personal Statement

Highlights of Allan Hoffman's Biography

Overview and appreciation

Molecular surface tailoring of biomaterials via pulsed RF plasma discharges p. 3

Introduction of amine groups on poly(ethylene) by plasma immobilization of a preadsorbed layer of decylamine hydrochloride p. 19

A wettability gradient as a tool to study protein adsorption and cell adhesion on polymer surfaces p. 37

Activity of horseradish peroxide adsorbed on radio frequency glow discharge-treated polymers p. 53

Patterned neuronal attachment and outgrowth on surface modified, electrically charged fluoropolymer substrates p. 69

New biomaterials through surface segregation phenomenon: New quaternary ammonium compounds as antibacterial agents p. 95

Biomaterials with permanent hydrophilic surfaces and low protein adsorption properties p. 109

Surface properties of RGD-peptide grafted polyurethane block copolymers: Variable take-off angle and cold-stage ESCA studies p. 129

Effect of polyurethane surface chemistry on its lipid sorption behavior p. 145

Residence time effects on monoclonal antibody binding to adsorbed fibrinogen p. 161

Adsorption behavior of fibrinogen to sulfonated polyethyleneoxide-grafted polyurethane surfaces p. 181

Effects of branching and molecular weight of surface-bound poly(ethylene oxide) on protein rejection p. 195

Formation of protein multilayers and their competitive replacement based on self-assembled biotinylated phospholipids p. 205

Identification of proteins adsorbed to hemodialyser membranes from heparinized plasma p. 221

Mechanism of cytoplasmic calcium changes in platelets in contact with polystyrene and poly(acrylamide-co-methacrylic acid) surfaces p. 237

The synthesis of a water soluble complement activating polyacrylic acid-IgG polymer p. 255

A novel biomaterial: Poly(dimethylsiloxane)-polyamide multiblock copolymer I. Synthesis and evaluation of blood compatibility p. 267

Synthesis and nonthrombogenicity of fluoroalkyl polyetherurethanes p. 277

Surface and bulk effects on platelet adhesion and aggregation during simple (laminar) shear flow of whole blood p. 287

A model for thromboembolization on biomaterials p. 303

A canine ex vivo shunt for isotopic hemocompatibility evaluation of a NHLBI DTB primary reference material and of an IUPAC reference material p. 319

Effects of environmental parameters and composition of poly (2-hydroxyethyl methacrylate)-graft-polyamine copolymers on the retention of rat lymphocyte subpopulations (B- and T-cells) p. 335

In vitro leukocyte adhesion to modified polyurethane surfaces: III. Effect of flow, fluid medium, and platelets on PMN adhesion p. 357

Basic fibroblast growth factor production in vitro by macrophages exposed to Dacron and polyglactin 910 p. 373
Fibroblast attachment to Arg-Gly-Asp peptide-immobilized poly([gamma]-methyl L-glutamate) p. 391

Cell-attachment activities of surface immobilized oligopeptides RGD, RGDS, RGDV, RGDT, and YIGSR toward five cell lines p. 405

Receptor-mediated regulation of differentiation and proliferation of hepatocytes by synthetic polymer model of asialoglycoprotein p. 415

Growth of human cells on plasma polymers: Putative role of amine and amide groups p. 433

Synthesis and application of new microcarriers for animal cell culture. Part I: Design of polystyrene based microcarriers p. 457

Synthesis and application of new microcarriers for animal cell culture. Part II: Application of polystyrene microcarriers p. 471

Monosize microbeads based on polystyrene and their modified forms for some selected medical and biological applications p. 481

Covalent immobilization of microorganisms in polymeric hydrogels p. 503

Immobilization of a lysine-terminated heparin to polyvinyl alcohol p. 517

Surface modification of polymeric biomaterials with poly(ethylene oxide), albumin, and heparin for reduced thrombogenicity p. 535

Antiproliferative capacity of synthetic dextrans on smooth muscle cell growth: the model of derivatized dextrans as heparin-like polymers p. 553

Heparin surface immobilization through hydrophilic spacers: Thrombin and antithrombin III binding kinetics p. 567

Physico-chemical surface characterization of hyaluronic acid derivatives as a new class of biomaterials p. 583

Fibroblast contraction of collagen matrices with and without covalently bound hyaluronan p. 613

Chemical modification of biopolymers-mechanism of model graft copolymerization of chitosan p. 625

Preparation of DNA-carrying affinity latex and purification of transcription factors with the latex p. 635

In vivo evaluation of polyurethanes based on novel macrodiols and MDI p. 647

Morphology of block copolyurethanes: V. The effect of [actual symbol not reproducible] spacers between aromatic rings p. 661

Polyisobutylene-toughened poly(methyl methacrylate): III. PMMA-I-PIB networks as bone cements p. 675

Synthesis and characterization of a new biodegradable semi-solid poly(ortho ester) for drug delivery systems p. 683

Design, synthesis, and preliminary characterization of tyrosine-containing polarylates: New biomaterials for medical applications p. 695

A study on the in vitro degradation of poly(lactic acid) p. 709

Poly-DL-lactic acid: Polyethylene glycol block copolymers. The influence of polyethylene glycol on the degradation of poly-DL-lactic acid p. 725

Synthesis and characterization of putrescine-based poly(phosphoester-urethanes) p. 737

Oxidative degradation of Biomer fractions prepared by using preparative-scale gel permeation chromatography p. 753

Characterization of extractable species from poly(etherurethane urea) (PEUU) elastomers p. 769

Controlled release of [actual symbol not reproducible] from a biodegradable matrix for bone regeneration p. 791
Controlled release of [beta]-estradiol from biodegradable microparticles within a silicone matrix p. 807

Ultrasonically enhanced transdermal drug delivery. Experimental approaches to elucidate the mechanism p. 821

Synthesis of carboxylated poly(NIPAAm) oligomers and their application to form thermo-reversible polymer-enzyme conjugates p. 833

Synthesis and characterization of a soluble, temperature-sensitive polymer-conjugated enzyme p. 845

Activated, N-substituted acrylamide polymers for antibody coupling: Application to a novel membrane-based immunoassay p. 857

Temperature-dependent adsorption/desorption behavior of lower critical solution temperature (LCST) polymers on various substrates p. 871

A polymeric drug delivery system for the simultaneous delivery of drugs activatable by enzymes and/or light p. 885

Formation of poly(glucosyloxyethyl methacrylate)-Concanavalin A complex and its glucose-sensitivity p. 907

Poly(ethylene oxide) star molecules: Synthesis, characterization, and applications in medicine and biology p. 919

Investigations of the architecture of tamarind seed polysaccharide in aqueous solution by different scattering techniques p. 931

Attempts to stabilize a monoclonal antibody with water soluble synthetic polymers of varying hydrophobicity p. 943

Do hydrogels contain different classes of water? p. 957

Properties controlling the diffusion and release of water-soluble solutes from poly(ethylene oxide) hydrogels 1. Polymer composition p. 971

Properties controlling the diffusion and release of water-soluble solutes from poly(ethylene oxide) hydrogels 2. Dispersion in an initially dry slab p. 989

Dextran permeation through poly(N-isopropylacrylamide) hydrogels p. 1009

Poly(vinyl alcohol) hydrogels as soft contact lens material p. 1021

Polyimide-polyethylene glycol block copolymers: Synthesis, characterization, and initial evaluation as a biomaterial p. 1031

Evidence for Fickian water transport in initially glassy poly(2-hydroxyethyl methacrylate) p. 1043

Biochemo-mechanical function of urease-loaded gels p. 1061

Electro-driven chemomechanical polymer gel as an intelligent soft material p. 1067

Polyanionic hydrogel as a gastric retentive system p. 1079

Release behavior of bioactive agents from pH-sensitive hydrogels p. 1089

pH, salt, and buffer dependent swelling in ionizable copolymer gels: Tests of the ideal Donnan equilibrium theory p. 1105

Swelling controlled zero order and sigmoidal drug release from thermo-responsive poly(N-isopropylacrylamide-co-butyl methacrylate) hydrogel p. 1123
