Foreword p. 5
Opening speech by the President p. 9
The President’s report on the activities of ICAR since the last session p. 13
Animal recording in New Zealand p. 15
New Zealand dairy farmers’ expectations of animal recording - now and in the future p. 25
Impact of the changing political environment on animal recording with emphasis on the European Union and Eastern Europe p. 31
Traders in animal genetics expectations of animal recording - now and in the future p. 41
The impact of emerging genetic technologies on animal recording p. 47
The necessity for identification and registration of bovine animals from birth to consumer p. 53
Animal identification as a tool in the Danish cattle database p. 59
Quantifying the value of identification in the USA Holstein population p. 63
Recording in large herds p. 69
Using PC based lactation calculations to provide management information p. 73
Interfaces between recording organisations and Government run national databases p. 77
System InvenTaurus p. 79
Web data processing in dairy cattle improvement p. 83
Integrated information service for the New Zealand dairy industry p. 91
Data recording in robotic milking p. 97
An integrated approach to pedigree and performance recording, genetic evaluation and information transfer for beef cattle in South Africa p. 105
Genetic evaluation for kiwi cattle p. 113
Use of high performance computing is solving large mixed model equations in animal breeding p. 117
Approval and checking procedures for electronic milk meters in French farms: a survey over the last 15 years p. 123
Quality control of conventional mid-infra-red milk analysers using recombined milk samples p. 131
Tendencies in AM/PM recording in Germany and non-conventional recording methods in the future p. 139
The introduction of a milk recording system based on milk yields of ICAR approved electronic milk meters and AT4 sampling for fat, protein and SCC p. 147
Electronic data interchange between milk meters and the central computers for milk recording and evaluations (EDI-MM2CC) p. 151
Simplifying schemes for recording fat and protein contents in Sarda dairy sheep p. 155
Actual aspects of quality management in the routine laboratory determining milk contents and milk quality p. 161
Internationally certified milk recording following DIN EN ISO 9002 in the Federal State of Sachsen-Anhalt - necessity and first results p. 165
Experience with ISO 9000 in Livestock Improvement Corporation Limited in herd recording and herd testing p. 169
The benefits of scale and integration - The New Zealand experience p. 171
Optimisation of production using management control systems p. 177
