Introduction p. 1
Cleanroom Approach to Space Software Reliability p. 5
The Columbus Ground Software as a Development Support System for the ISS Life-Cycle p. 13
From HOOD to UML: A Smooth Migration Path p. 23
Design and Validate Embedded SW with the Formal Language SDL p. 33
ESSI Project 23750 - Software Projects Improvement Process p. 45
End to End Approach for Satellite Data Management: Concepts, ASSP Products, System Integration p. 55
Spanish Minisat 01 On-Board Data Handling Computer (Design and One Year Operation) p. 61
MINISAT01 On-Board Software Maintenance p. 65
A Digital Preprocessor for Image Correction and Compression p. 71
Radiation Hard Standard ASICs for On-Board Applications p. 79
Testing of High Rate Digital Links Under Radiation Environment p. 87
Fast Low Complexity Reed Solomon Codec for Space and Avionics Ramdisk Applications p. 95
Use of Web and Object-Oriented Technologies in Image Processing Centre Development: An Example p. 105
Single-Source Object-Oriented Technology in Modeling and Simulation of Spaceborne Systems p. 109
Evaluation of the ObjectGEODE Methodology p. 115
Case Tool Evaluation p. 121
GNU Based Compilation System for Space Embedded Applications p. 137
Can We Use Commercially Available Software Tools for Space Applications? The TSC21020E Software Elements Validation Activity p. 141
On-Board Geometric Corrections for Meteosat Second Generation p. 147
SMCSLite - An IEEE-1355 Terminal Front-End for Embedded Front-End Interface Solutions p. 153
A New Remote Terminal for 4-255 Data Management System Bus p. 159
A Mixed Signal ASIC for Automatic Retrieval of Essential Spacecraft Status and Sensor Data p. 163
A Versatile ERC32 Based Computer Board for Space Applications p. 171
A New Generation of Payload Processors Based on Layered Architecture and Modular Assembly p. 175
Telecommunication Spaceborne Payload Data Handling Architectures p. 183
FPGA Based OBDH Bus Controller p. 189
C Code Inspection Tool for Software Quality Assurance p. 195
ARIANE 5 - The Software Reliability Verification Process p. 201
Assistance in Software Validation p. 207
Configuration Control for Embedded Systems p. 223
Automated Transfer Vehicle - Architecture and Development Facilities of the ATV Software p. 233
MERIS Data Handling Architecture p. 237
The Pics System Modularity p. 245
A Methodology for Platform Integrated Control System (PICS) S/W Development p. 255
A Modular Approach for a Scalable Multi-Mission Equipment p. 267
Reusing Software Testing Tools for Operations and Software Maintenance p. 275
Test and Verification Equipment for the Attitude and Orbit Control System of the XMM Satellite p. 281
Automated Requirements-Based Testing on Boeing 777 Display p. 289
Automated Validation Process of User Interface Systems p. 295
CORBA Technology for Ground Segment System Software Development p. 303
PLUTO, a Procedure Language for Users in Test and Operations p. 307
Avionics Application Development, Coalesce Certifiability with Business Opportunity p. 313
ERA Safety Strategy p. 321
Implementing Safety Critical Systems with Multiple Levels of Integrity p. 327
Time-Related Dependability Mechanisms in Guards p. 335
Hard Real Time Onboard a Satellite p. 353
A Standardized Management Information Base for Telecommunication Satellites p. 361
The Vegetation Programming Center, a New Subsystem in the Spot4 Ground Segment Architecture p. 367
Meteosat Second Generation (MSG) Central Facility: a new Mission Control System p. 377
The Application of Intelligent Systems to the Automation of Space System Test and Operations within a Graphical Environment p. 383
Competence Management with EuroSim Centred CACE Working Environments p. 393
An Advanced Simulation Facility for MSG: How SiMWARE Met SSF p. 399
SINUS: the Software Simulator for the SPOT Satellite Family p. 407
Are Neural Networks a Fault-Tolerant Solution for Space Missions? p. 415
A Fault-Tolerant Computer for Space Applications p. 421
Requirements Development for the Tendering Process p. 437
Use of Behavioural Simulation to Improve Complex System Requirements Capture Using Intranet and JAVA Technologies p. 443
Requirements Engineering as a State of Practice for Ground Segment Systems Development p. 449
Distributed Interactive Simulations on ATM Networks for Space Systems Validation p. 459
A Simulation-Oriented System Engineering Environment p. 467
System Simulation and Verification Facility p. 473
Data System in Flight and Emission Modelling p. 483
