Friedel Sellschop's Photo
Walter Greiner's Dinner Speech: Prologue and Poem
Laudatio
Group Photo
Nuclear Physics and Applied Nuclear Physics
On the need for comprehensive studies of heavy-ion reactions
New vistas of fission and neutron rich nuclei
The synthesis of superheavy elements-the state of the art
Chiral symmetry restoration in nuclei
Pre-equilibrium reactions
Meson production in hadronic reactions
Meson production in p+d reactions
Semi-empirical effective interactions for inelastic scattering derived from the Reid potential
Atomic Physics and Applied Atomic Physics
Channeling revisited
Radiation physics with diamonds
Channeling of charged particles through periodically bent crystals: On the possibility of a Gamma Laser
Novel interferometer in the X-ray region
Scientific opportunities at third- and fourth-generation X-ray sources
Wave packet molecular dynamics simulations of the equation of state of hydrogen and deuterium under extreme conditions
Heavy-ions stopping in plasmas
Heavy-ion stopping: Bohr theory revisited
Radiation effects microscopy and charge transport simulations
Bombardment-induced topography on semiconductor surfaces
The activation volume for shear
Elementary Particle Physics
Challenges and opportunities in particle physics
Superstrings: Why Einstein would love spaghetti in fundamental physics
Common features of particle multiplicities in heavy-ion collisions
The influence of strong crystalline fields on QED-processes investigated using diamond crystals in [gamma],[gamma] colliders
Using crystals to solve the nucleon 'spin crisis' TODAY...and looking for Physics beyond the Standard Model TOMORROW
Search for strangeness at new ultra-relativistic heavy-ion colliders
Confinement in the Big Bang and deconfinement in the Little Bangs at CERN-SPS
A confrontation with infinity
Current status of quark-gluon plasma signals
Chiral model calculations of nuclear matter and finite nuclei p. 346
Parton showers and multijet events p. 354
Signatures of the quark-gluon plasma: a personal overview p. 363
Neutrino Physics and Nuclear Astrophysics
Perspectives of Nuclear Physics: From super heavies via hypermatter to antimatter and the structure of a highly correlated vacuum p. 373
H.E.S.S.--an array of stereoscopic imaging atmospheric Cherenkov telescopes currently under construction in Namibia p. 403
Cosmic particle acceleration-electron vs. nuclei p. 411
Atomic and Nuclear Physics in the Study of Diamond
Hydrogen mobility in diamond p. 422
Applications of Pure and Applied Physics in Technology
Tumor therapy with high-energy heavy-ion beams p. 433
IBA techniques to study Renaissance pottery techniques p. 441
The bias in thickness calibration employing penetrating radiation p. 449
The measurement of very old radiocarbon ages by accelerator mass spectrometry p. 457
Science Policy and Anticipations*
Choosing good science in a developing country p. 474
Science partnerships for an African Renaissance: a framework for Ngumzo p. 482
Policy frameworks in science and technology: Then, Now and Tomorrow p. 493
Posters
Localised solutions of the parametrically driven complex Ginzburg-Landau Equation p. 502
[$\pi^0$ and $\eta$] photoproduction off the proton at GRAAL p. 510
Muon(Ium) in nitrogen-rich and [superscript 13]C diamond p. 517
Positrons in diamond p. 525
Study of the momentum transfer to target-like residues in heavy-ion reactions by prompt Gamma measurements p. 535
The Schonland nuclear microprobe--an important tool in Geosciences p. 543
Ultra-thin single crystal diamond p. 552
Roasting Speeches at Dinner Party
Richard Sellschop et al. p. 561
Joseph Hamilton p. 566
Paul Kienle p. 568
Ettore Gadioli p. 569
Helmut Appel p. 571
Christian Toepffer p. 573
Closing Ceremony--The Three Devils
For the overseas delegates p. 577
For Friedel p. 582
Conference Programme p. 589
List of Participants p. 595
Author Index p. 605
