Stereotactic treatment planning using fused multi-modality imaging p. 3
Non-rigid registration of intraoperatively acquired 3D ultrasound data of brain tumors p. 11
Comparison of different registration methods for navigation in cranio-maxillofacial surgery p. 19
Localisation of moving targets for navigated radiotherapy p. 26
Accuracy and practicability of laser surface scanning for registration in image guided neurosurgery p. 31
Using the AWIGS system for preparation of computer aided surgery p. 37
Ultra-fast holographic recording and automatic 3D scan matching of living human faces p. 43
Automatic coarse registration of 3D surface data in oral and maxillofacial surgery p. 51
Automated marker detection for patient registration in image guided neurosurgery p. 59
Clinical relevance of preoperative CT-based computer aided 3D-planning in hepatobilary, pancreatic surgery and living donor liver transplantation p. 69
Analysis of drill sound in spine surgery p. 77
Experimental navigation setup for coronary interventions p. 85
Beating heart tracking in robotic surgery using 500 Hz visual servoing p. 93
Occlusion-robust, low-latency optical tracking using a modular scalable system architecture p. 101
Development of autoclavable reflective optical markers for navigation based surgery p. 109
Iso-C 3D navigated drilling of osteochondral defects of the talus: a cadaver study p. 118
Development of a navigation system for transcranial magnetic stimulation (TMS) p. 122
Fluoroscopy based navigated drilling of four osteonecrotic lesions in one patient p. 129
Iso-C 3D accuracy-control and usefulness at calcaneus osteosynthesis p. 133
Craniofacial endosseus implant positioning with image-guided surgical navigation p. 137
A hybrid approach to minimally invasive craniomaxillofacial surgery: videoendoscopic-assisted interventions with image-guided navigation p. 144
Geometrical control approaches for minimally invasive surgery p. 152
Prospective head motion compensation by updating the gradients of the MRT p. 160
Non-invasive intraoperative imaging using laser radar imaging in hip-joint replacement surgery p. 171
Accuracy in computer assisted implant dentistry: image guided template production vs. burr tracking p. 180
3D-accuracy analysis of fluoroscopic planning and navigation of bone-drilling procedures p. 187
Accuracy of fluoroscope and navigated controlled hind- and midfoot correction of deformities - a feasibility study p. 193
Navigation error of update navigation system based on intraoperative MRI p. 198
Accuracy analysis of vessel segmentation for a LITT dosimetry planning system p. 204
Resection of bony tumors within the pelvis - hemipelvectomy using navigation and implantation of a new, custom made prosthesis p. 217
