Albert Einstein: opportunity and perception p. 4
Quantum optics with single atoms and photons p. 10
Quantum information system experiments using a single photon source p. 16
Quantum communication and quantum computation with entangled photons p. 24
High-fidelity quantum teleportation and a quantum teleportation network for continuous variables p. 29
Long lived entangled states p. 33
Quantum non-locality using tripartite entanglement with non-orthogonal states p. 38
Quantum entanglement and wedge product p. 42
Analysis of the generation of photon pairs in periodically poled lithium niobate p. 46
Generation of entangled photons in a semiconductor and violation of Bell's inequality p. 50
Decoherence of a Josephson junction flux qubit p. 54
Spectroscopic analysis of a candidate two-qubit silicon quantum computer in the microwave regime p. 60
Berry phase detection in charge-coupled flux-qubits and the effect of decoherence p. 64
Locally observable conditions for the successful implementation of entangling multi-qubit quantum gates p. 68
State control in flux qubit circuits: manipulating optical selection rules of microwave-assisted transitions in three-level artificial atoms p. 72
The effect of local structure and non-uniformity on decoherence-free states of charge qubits p. 76
Entanglement-assisted estimation of quantum channels p. 80
Superconducting quantum bit with ferromagnetic [pi]-Junction p. 84
Generation of macroscopic Greenberger-Horne-Zeilinger states in Josephson systems p. 88
Tunable tunnel and exchange couplings in double quantum dots p. 92
Coherent transport through quantum dots p. 99
Electrically pumped single-photon sources towards 1.3 [mu]m p. 105
Aharonov-Bohm-type effects in antidot arrays and their decoherence p. 109
Nonequilibrium Kondo dot connected to ferromagnetic leads p. 113
Full counting-statistics in a single-electron transistor in the presence of strong quantum fluctuations p. 117
Geometry and the anomalous Hall effect in ferromagnets p. 121
Control of spin chirality, Berry phase, and anomalous Hall effect p. 127
Quantum geometry and Hall effect in ferromagnets and semiconductors p. 134
Spin-Hall effect in a semiconductor two-dimensional hole gas with strong spin-orbit coupling p. 140
Intrinsic spin Hall effect in semiconductors p. 146
Theory of spin transfer phenomena in magnetic metals and semiconductors p. 150
Spin filters of semiconductor nanostructures p. 159
Experimental study on current-driven domain wall motion p. 165
Magnetization reversal of ferromagnetic nano-dot by non local spin injection p. 171
Theory of current-driven domain wall dynamics p. 177
Magnetic impurity states and ferromagnetic interaction in diluted magnetic semiconductors p. 183
Geometrical effect on spin current in magnetic nano-structures p. 187
Ferromagnetism in anatase TiO[subscript 2] codoped with Co and Nb p. 191
Nonlinear quantum effects in nanosuperconductors p. 194
Coalescence and rearrangement of vortices in mesoscopic superconductors p. 200
Superconductivity in topologically nontrivial spaces p. 204
DC-SQUID ratchet using atomic point contact p. 208
Superconducting wire network under spatially modulated magnetic field p. 212
Simple and stable control of mechanical break junction for the study of superconducting atomic point contact p. 216
Critical currents in quasiperiodic pinning arrays : one-dimensional chains and Penrose lattices p. 220
Macroscopic quantum tunneling in high-Tc superconductor Josephson junctions p. 224
Carbon nanotubes and unique transport properties : importance of symmetry and channel number p. 228
Optical processes in single-walled carbon nanotubes threaded by a magnetic flux p. 234
Non-equilibrium transport through a single-walled carbon nanotube with highly transparent coupling to reservoirs p. 242
Transport properties in low dimensional artificial lattice of gold nano-particles p. 246
First principles study of dihydride-chain structures on H-terminated Si(100) surface p. 250
Electrical property of Ag nanowires fabricated on hydrogen-terminated Si(100) surface p. 254
Effect of environment on ionization of excited atoms embedded in a solid-state cavity p. 258
Development of universal virtual spectroscope for optoelectronics research : first principles software replacing dielectric constant measurements p. 262
Quantum Nernst effect p. 266
Quantum phenomena visualized using electron waves p. 270
An optical lattice clock : ultrastable atomic clock with engineered perturbation p. 276
Development of Mach-Zehnder interferometer and "coherent beam steering" technique for cold neutron p. 282
Surface potential measurement by atomic force microscopy using a quartz resonator p. 286
Berry's phases and topological properties in the Born-Oppenheimer approximation p. 290
Self-trapping of Bose-Einstein condensates by oscillating interactions p. 294
Spinor solitons in Bose-Einstein condensates - atomic spin transport p. 298
Spin decoherence in a gravitational field p. 302
Berry's phase of atoms with different sign of the g-factor in a conical rotating magnetic field observed by a time-domain atom interferometer p. 306
