Foreword ix

List of contributors xi

Introduction Samuel C. Snedaker xiii

PART I CHARACTERIZATION OF THE MANGROVE ENVIRONMENT
1. Coastal landforms and geomorphic processes 3
   Bruce G. Thom
2. Climatic factors and the biology of mangrove plants 18
   François Blasco
3. Mangrove evolution and palynology 36
   François Blasco

PART II COMMUNITY STRUCTURE AND DESCRIPTION
4. Botanical surveys in mangrove communities 53
   Valentine J. Chapman (in memoriam)
5. Taxonomic considerations of the mangrove species 81
   François Blasco
6. Methods for studying mangrove structure 91
   Gilberto Cintrón and Yara Schaeffer Novelli
7. Waterlogged saline soils 114
   Kevin G. Boto
8. Analyses of soil, plant and water components 131
   Federico Pannier
9. Methods for the study of mangrove fauna 145
   A. Sasekumar

10. Determination of estuarine animal biomass 162
    Iver M. Brook

11. Role of diatoms in the mangrove habitat 175
    Keith E. Cooksey

PART III MANGROVE FUNCTIONS AND COMMUNITY PROCESSES

12. Mangrove physiology: photosynthesis 183
    Federico Pannier

13. Mangrove physiology: water relations 208
    Federico Pannier

14. Mangrove leaf litter production and dynamics 231
    Melvin S. Brown

15. Litter decomposition and nutrient enrichment 239
    Jack W. Fell, I. M. Master and R. G. Wiepert
