List of principal contributors ix

Introduction 1
R.D. Mann

1 Oral contraceptives and breast cancer risk – a problem of consent 7
R.D. Mann

Section 1: Case–control studies which provide data on oral contraceptive use before first full-term pregnancy or age 25

2 Oral contraceptives and breast cancer: the UK National Case–Control Study 37
C.E.D. Chilvers

3 Summary and update of the Oxford-based studies 55
K. McPherson

4 Oral contraceptives and the risk of breast cancer 67

5 Oral contraception and breast cancer in New Zealand 85
C. Paul, D.C.G. Skegg and G.F.S. Spears

6 Update of the Swedish–Norwegian case–control study on oral contraceptive use and breast cancer in young women: the possible role of bias 99
E. Lund, O. Meirik, H-O. Adami and T. Christoffersen

General discussion I 111

7 The Jephcott Lecture, 1989: An overview of the benefits and risks of combined oral contraceptives 121
M.P. Vessey

8 Breast cancer and early oral contraceptive use: studies from the Slone Epidemiology Unit 137
D.R. Miller
Section 2: Other case-control studies

11 Oral contraceptive use, other personal characteristics and breast cancer risk in San Francisco Bay Area women, 1970–77
R.S. Paffenbarger, Jr., J.B. Kampert and R.T. Hyde

12 Update of the 1982 study among participants in the Breast Cancer Detection Demonstration Project and plans for a new study
L.A. Brinton

13 A prospective study of oral contraceptive use and the risk of breast cancer in women

14 Oral contraceptives and breast cancer: update of an Italian case-control study
C. La Vecchia

Section 3: Cohort studies

15 Results from the Royal College of General Practitioners' Oral Contraception Study
C.R. Kay

16 Results from the Oxford–Family Planning Association Study
M.P. Vessey

General discussion II

Section 4: The wider aspects

17 The role of the gynaecologist in the management of breast cancer
H.R.K. Barber

18 Breast cancer, the pill and the press
D.A. Grimes
19 Hormonal contraception with LHRH agonists and the prevention of breast and ovarian cancer
M.C. Pike

20 The view of a family planning doctor on the long-term use of oral contraceptives in young women
R.J.E. Kirkman

21 Breast epithelial responses and steroid receptors during oral contraceptive use
T.J. Anderson, S. Battersby, R.J.B. King and K. McPherson

22 The need for future studies of breast cancer risk in relation to oral contraceptive use: a comprehensive strategy
S. Shapiro and L. Rosenberg

General discussion III

23 What conclusions can we reach and how do we best assist women to make informed choices regarding their use of oral contraceptives
R. Doll

24 Closing remarks
C.C. Booth
