Pharmacological Interventions on Central Cholinergic Mechanisms in Senile Dementia (Alzheimer's Disease)

International Satellite Symposium to the IV. World Conference on Clinical Pharmacology and Therapeutics
Berlin, July 28–30, 1989

122 Figures
and 55 Tables
Contents

Lehr U. (Bonn): Address by the Federal Minister of Youth, Family Affairs, Women, and Health ........................................ IX
Introduction .................................................................................. XI

A. Lectures

I. Nerve Growth Factor

Thoenen H. (Martinsried): Physiological Functions of Nerve Growth Factor in the Central Nervous System: Implications for the Treatment of Alzheimer's Disease .................................................. 3

Hersh L.B., Kong C.F., Hilt D. (Dallas): Isolation of a Genomic Clone of Human Choline Acetyltransferase ..................................... 15

II. Special Lecture

Erdmann V.A., Stiege W., Henze P.P., Ulbrich N. (Berlin): Protein Engineering with and without Cloning ........................................ 45

III. Morphology and Amyloid

Cervos-Navarro J., Gertz H.J. (Berlin): Morphological Aspects in the Alzheimer Type Dementia .................................................. 57

IV. Psychopathology and Therapeutics in Humans

Kanowski S. (Berlin): Psychopathology of Senile Dementia (Alzheimer’s Disease) .................................................. 75
Jones G.M.M., Sahakian B.J. (London): The Effects of Nicotine in Patients with Dementia of the Alzheimer Type .................................................. 89
Murphy M.F. (Somerville): Observations during the Clinical Development of a Cholinesterase Inhibitor (HP 029 (Velnacrine Maleate)) for Alzheimer’s Disease: An Industry Perspective .................................................. 97

V. Experimental Therapy

Biesold D., Bigl V., Arendt T. (Leipzig): Revaluation of the Cholinergic Hypothesis of Geriatric Memory Dysfunction .................................................. 121
Martin K.J., Widdowson L. (Cambridge): The Role of Membrane Phospholipids in Acetylcholine Synthesis: Observations with Pyritinol .................................................. 129
Löffelholz K. (Mainz): Free Choline in Brain: A Regulatory Role of Cholinoceptor-controlled Mobilization from Phospholipids .................................................. 153

B. Short Communications

I. Nerve Growth Factor

Ehrhard P., Otten U. (Basel): A Sensitive Assay for Quantification of Nerve Growth Factor Receptors in Human Brain .................................................. 171
von Frankenberg M., Lorez H.P., Otten U. (Basel): Reactive Astrogliosis Correlates with Increase in Nerve Growth Factor Content in Basal Nucleus and Neostriatum of Adult Rat Brain Following Cerebral Decortication ................................................. 173

Hellweg R., Nitsch R., Hock Ch., Mayer G., Hoyer S. (München): Changes of Nerve Growth Factor Levels in the Central Cholinergic System of Aged Learning-impaired Rats Resemble Streptozotocin-induced Impairments of Brain Glucose Metabolism and Learning Abilities in Adult Rats ................................................................. 180

Rost K.-L., Pleul O., Kewitz H. (Berlin): Choline Acetyltransferase-like Activity in Human Cerebrospinal Fluid ................................................................. 191

Rost K.L., Brockmöller J., Weber W., Bickel U., Cuprunov M., Roots J. (Berlin): Multiple Dose Pharmacokinetics of Ganglioside GM1 after i.v. and i.m. Administration to Healthy Volunteers ................................................................................. 195

II. Morphological and Binding Studies

Gertz H.-J. (Berlin): Synaptic Plasticity in Alzheimer's Disease ................................................................. 201

Wiemer G., Hock F.J., Gerhards H.J., Urbach H. (Frankfurt): Behavioral and Neurochemical Effects in Mice and Rats by Hoe 065, a Compound Structurally Related to Inhibitors of Angiotensin-converting Enzyme ................................................................. 204

Bickel U., Kewitz H. (Berlin): Nerve Growth Factor Receptor-like Immunoreactivity is Restricted to Cholinergic Neurons of the Basal Forebrain in Newborn and Adult Rats: Colocalization of NGFR and ChAT ................................................................................. 212

Schulze G., Siebel A. (Berlin): Central Muscarinic Activity, Memory Impairment and Cholinergic Receptors in Aging Rats ................................................................................. 218

III. Therapeutic Approaches in Humans

Urso R., Cerri D., Baldi A., Segre G. (Siena): A Central Anticholinesterase Drug (Heptyl-Physostigmine): Pharmacokinetics in Rats and Humans after Different Doses ................................................................. 228
