Contents

Chapter 1
Introduction to Drugs and Pharmacy ........................................... 1

Chapter 2
Drug Substances ............................................................................ 31

Chapter 3
Dosage Form Design: Biopharmaceutic Considerations ............ 51

Chapter 4
Dosage Form Design: Pharmaceutic Ingredients, Product Formulation, and Current Good Manufacturing Practice .... 92

Chapter 5
Peroral Solids, Capsules, Tablets, and Controlled-Release Dosage Forms ............................................................... 134

Chapter 6
Oral Solutions, Syrups, and Elixirs ............................................... 196

Chapter 7
Oral Suspensions, Emulsions, Magmas, and Gels .................... 225

Chapter 8
Injections, Sterile Fluids, and Products of Biotechnology ...... 255

Chapter 9
Transdermal Drug Delivery Systems, Ointments, Creams, Lotions, and Other Preparations ................................. 307
Chapter 10
Ophthalmic, Nasal, Otic, and Oral Preparations
Applied Topically .......................................................... 347

Chapter 11
Suppositories and Other Rectal, Vaginal, and Urethral
Preparations ................................................................. 373

Chapter 12
Aerosols, Inhalations, and Sprays .................................... 390

Chapter 13
Miscellaneous Preparations: Tinctures, Fluidextracts, Extracts,
Aromatic Waters, Diluted Acids, Spirits, Effervescent Salts,
Divided Powders, Tablet Triturates, and
Radiopharmaceuticals...................................................... 406

APPENDIX
I. Definitions of Selected Drug Categories ....................... 424
II. Pharmaceutical Systems and Techniques of Measurement .. 435

INDEX ............................................................................ 445
