Preface

KINETIC MODELS

1. Order of reaction. 1
5. Second order kinetics {A₀=B₀}. Diethylaminolysis of propyl paraben. [A + B → C] 43
7. Second order – Pseudo first order kinetics {B₀≫A₀} Methyl salicylate hydrolysis. [A + B → C] 59
9. Sequential first order kinetics {k₁≠k₂}. Betamethasone-17-valerate rearrangement and hydrolysis. [A → B → C] 75
10. Sequential first order kinetics {k₁=k₂}. [A → B → C] 93
11. Sequential-competitive three component closed system. Transesterification and hydrolysis of methyl salicylate. [A → B → C] 101
