PHOTOGUIDE TO DRUG ADMINISTRATION
Contents

Contributors and consultants xi
Acknowledgments xii
Foreword xiii

MEDICATION OVERVIEW
Reviewing Fundamentals
- Taking necessary precautions 1
- The seven “rights” of drug administration 1
- The nursing process and drug therapy 2
- Rules of safe drug administration 3
- How drugs work 3
- How patient factors influence drug action 4
- Universal precautions 5
- Documenting medications correctly 6
- Documenting oral orders 6
- Safeguarding against errors 6
- Questioning drug orders 6
- Age-related changes or drug reactions? 7
- Refusing to administer a drug 7
- Preparing an incident report 7
- Sample medication Kardex 8
- What to do if a patient refuses medication 10
- Incident report 11

GASTROINTESTINAL
ROUTE
Oral Administration
- How oral medication is absorbed 12
- Learning about tablets and capsules 12
- Ensuring absorption 12
- How oral medication is absorbed in the GI tract 13
- How to give tablets and capsules 13
- How to measure liquid medication in a disposable cup 14
- Administering oral drugs 14
- How to give medication to an infant 15
- Nursing considerations: Oral administration 15
- Giving medication to special patients 16
- Reviewing liquid oral medications 17

Tube Administration
- How to insert an NG tube 19
- Equipment for NG tube insertion 19
- Comparing gastric tubes 21
- How to give medication through an NG tube 22
- How to remove an NG tube 23
- How to give medication through a gastrostomy tube 23
- How to irrigate a nonpatent gastrostomy tube 24
- Nursing considerations: Gastrostomy tubes 25
- How to change a gastrostomy dressing 25
- Teaching gastrostomy care 26
- How to reinsert a gastrostomy tube with an indwelling catheter 26
- The button device: An alternative to the gastrostomy tube 26

**RESPIRATORY ROUTE**

**Endotracheal Administration**
- Intermittent positive pressure breathing therapy 54
- Preparing a patient for IPPB therapy 54
- Nursing considerations: IPPB therapy 54
- Portabird II 54
- Endotracheal tube administration 55
- How to give drugs through an endotracheal tube 55
- Endotracheal medication device 56
- How to use a metered-dose inhaler 56
- Drugs delivered by MDI 56
- How to use an InspirEase extender 57
- Breathancer extender 57
- How to use a turbo-inhaler 58

**INJECTION TECHNIQUES**

**Parenteral Injection**
- **Equipment**
  - Guide to syringes 60
  - Safety adaptation: Needle shield 60
  - Selecting needles 61
  - Safety adaptation: I.V. access system 62
  - How to prepare medication for injection 62
  - Preparing for injection 63

**Intradermal Administration**
- Learning about intradermal administration 63
- Intradermal injection sites 63
- How to inject medication intradermally 64
- How to read a diagnostic skin test 65

**Subcutaneous Administration**
- Learning about subcutaneous administration 66
- Subcutaneous administration sites 66
- How to inject medication subcutaneously 67
- How to mix insulins in one syringe using multidose vials 68
- Dial-a-Dose system 68
- Guidelines for insulin administration 69
- Guidelines for heparin administration 69

**Intramuscular Administration**
- Intramuscular injection sites 70
- Intramuscular injections: Pros and cons 71
- How to inject medication intramuscularly 72
- Nursing considerations: I.M. injections 72
- How to give intramuscular injections to infants and toddlers 73
- Maximum intramuscular solution volumes for children 74
- How to use the Z-track method 74
- Reducing the pain of intramuscular injections 75

**INFUSION TECHNIQUES**

**Intravenous Administration**
- When to give medications intravenously 76
- I.V. administration methods: How they differ 76
- Comparing peripheral venipuncture sites 77
- Choosing the venipuncture site 78
- How to spike and prime I.V. solutions 79
- Guide to needle and catheter gauges 80
- How to prime a filter 81
- Guidelines for using in-line I.V. filters 82
- How to add and prime a filter 82
Performing Venipuncture
How to dilate a vein 83
Locating hard-to-find veins 84
How to prepare the venipuncture site 84
How to use a steel winged needle 85
Stabilizing a vein for venipuncture 86
How to check needle placement and flow rate 86
How to insert an over-the-needle catheter 87
How to use a PROTECTIV catheter 88
How to secure the venipuncture device 88
Inside-the-needle catheter 89
How to tape venipuncture devices 89
How to apply a transparent semipermeable dressing 90
Protecting a scalp vein site 91
How to apply splints and restraints 91
How to make a mummy restraint 92
Documenting venipuncture 93
Treating extravasation 93
How to discontinue an I.V. 93

Infusing I.V. Solution
How to calculate the flow rate 94
Managing I.V. flow rate 94
Correcting obvious flow rate problems 95
Flow regulators 95
Understanding volume-control sets and filters 95
How to use a volume-control set with a membrane filter 96
Comparing I.V. administration sets 97
Avoiding common I.V. problems 98
Pediatric I.V. therapy 99
How to replace I.V. equipment 99

I.V. Drug Administration
How to administer intermittent I.V. therapy using a heparin lock 101
Guidelines for heparinization of intermittent infusion devices 102
Flushing heparin locks 102
Heparin practice survey 102
How to use a T-connector 103
How to mix secondary I.V. infusions 103
Hanging additive sets 104
Additive sets: Indications and contraindications 104
Additive sets: Alternative equipment 105
Caring for a patient with an additive set 105
How to use a partial-fill piggyback set 105
Using a needle lock device for secondary lines 106
CRIS: Another way to deliver secondary I.V. drugs 107
How to use a CRIS adapter 108
How to cope with drug incompatibilities 109
Risks of peripheral I.V. therapy 110

Central Venous Infusion
Selecting a central venous infusion device 115
Forms of central venous catheters 115
Central venous infusion: Pros and cons 115
Central venous infusion sites 116
Special Infusion Techniques

- Preparing the patient for insertion of a central venous catheter 117
- Comparing central venous infusion devices 118
- How to assist with central line insertion 122
- Central venous line complications 124
- Teaching Valsalva’s maneuver 127
- How to change a central venous line dressing 127
- How to change central venous line tubing 128
- How to remove a central line 128
- How to remove a catheter tip for culture 129
- Learning about the peripherally inserted central catheter 130
- Types of PICC lines 130
- PICC lines: Advantages and disadvantages 130
- How to insert a PICC line 131
- Measuring the peripheral catheter 131
- The Landmark midline venous access device 132
- Complications of PICC line insertion 133

Special Infusion Equipment

- Intraosseous infusion 134
- Epidural analgesia 135
- Comparing epidural analgesics 135
- Setup for epidural analgesia 136
- Managing adverse epidural drug reactions 136
- Assisting with insertion of an epidural catheter 137
- What is a blood patch? 137
- Nursing care plans for the patient with an epidural catheter 138
- Discontinuing epidural analgesic therapy 139
- Documentation 139
- The Ommaya reservoir: Intraventricular access to CSF 139
- Complications of epidural infusion 140
- Preparing to access the Ommaya reservoir 141
- Intraperitoneal therapy 141
- Intraperitoneal access devices 142

- Pumps and controllers: Electronic infusion devices 143
- What’s the difference between a controller and a pump? 143
- Electronic infusion device features 143
- Understanding I.V. resistance 144
- Learning about the Flo-Gard 6300 pump 144
- How to set up the Flo-Gard 6300 pump 145
- How to program the Flo-Gard primary line 146
- Learning about the LifeCare 5000 cassette drug delivery system 147
- How to set up the Plum primary line 147
- Patient-controlled analgesia pumps 149
- Learning about the Infusaid implantable pump 150
- Infusaid implantable pump 150
- How to refill an Infusaid pump 150
- Nursing considerations: Infusaid pump 151
- How to give a bolus dose through an Infusaid sideport 152
- Learning about subcutaneous access devices 153
- Implantation of the subcutaneous port 153
- Peripheral placement of a subcutaneous port 153
