Sterile Dosage Forms
Their Preparation and Clinical Application

Salvatore Turco, M.S., Pharm. D.
Professor of Pharmacy
Temple University School of Pharmacy
Philadelphia, Pennsylvania

Robert E. King, Ph.D.
Professor of Industrial Pharmacy
Philadelphia College of Pharmacy and Science
Philadelphia, Pennsylvania

3rd Edition

Lea & Febiger
Philadelphia
# Contents

## Chapter 1
- Introduction ........................................ 1
- History of Parenteral Medication .................... 1
- Development of Parenteral Packaging ............... 5
- Development of Routes of Administration .......... 6
- Advantages of Parenteral Administration .......... 7
- Disadvantages of Parenteral Administration ....... 8

## Chapter 2
- Composition ........................................... 10
- Types of Preparations .................................. 10
- Vehicles .................................................. 12
- Added Substances for Parenterals ................... 17
- Added Substances for Sterile Suspensions .......... 22
- Added Substances for Ophthalmic Solutions ........ 23

## Chapter 3
- Characteristics ....................................... 25
- Sterility ................................................ 25
- Freedom from Particulate Matter .................... 25
- Freedom from Pyrogens ................................ 28
- Stability ............................................... 32

## Chapter 4
- Large Scale Preparation .............................. 36
- Environmental Control ................................ 36
- Personnel .............................................. 39
- Packaging Components ................................ 40
- Preparation of Packaging Components .............. 43
- Preparation of Product ................................ 45
- Control ............................................... 49
- Labeling .............................................. 52

## Chapter 5
- Extemporaneous Preparation ......................... 54
- Parenteral Manufacturing in Hospitals ............. 54
- Environmental Control ................................ 55
- Personnel .............................................. 60
- Packaging Components ................................ 60
- Injections ............................................. 63
- Subdivision of Solution ................................ 67
- Sterile Solids ......................................... 70
- Sterile Suspensions ................................... 71
- Quality Control ....................................... 71
Chapter 6  Handling and Administration—Faye Consentino  75  
The Patient  75  Personnel Administering Parenteral Drugs  77  
Techniques of Parenteral Administration  79  
Intermittent Intravenous Therapy  87  
Transfusion Therapy  88  Initiating and Maintaining an Intravenous System  88  
Complications of Intravenous Therapy  89  
Restrictive Lists of Intravenous Medications and Agents that Qualified Nurses May Administer  91  

Chapter 7  Biopharmaceutic Factors Influencing Drug Availability—Stuart Feldman  101  
Physiochemical Influences on Bioavailability  102  
Physiologic Factors Influencing Drug Absorption  107  
Dosage Form Considerations  108  
Drug Absorption and Bioavailability From Intramuscular Injection  110  
Drug Absorption From Subcutaneous Injection  113  
Biopharmaceutics of Intrathecal Injections  113  

Chapter 8  Large-Volume Sterile Solutions  116  
Large-Volume Solutions for Intravenous Use  116  
Large-Volume Solutions Not Administered Intravenously  127  
Intravenous Fluid Administration Systems  131  
Storage of Intravenous Fluids  140  
Methods of Intravenous Administration  142  
Flow Rates of Intravenous Infusion Fluids  150  
Flow Control in I.V. Therapy  158  
Selection of Infusion Devices  167  
Justification for Infusion Devices  167  
Committee for Instrument Selection  168  
Criteria for Using Infusion Devices  169  
Standardized Concentration for Drugs Administered by Constant Infusion  171  
Mechanical Controlling Devices  171  
Recommendations for Infusion Devices  172  
Future Trends for Infusion Devices  172  
Plastic Medical Components  172  
I.V. Teams  174  
National Coordinating Committee on Large Volume Parenterals  175  
Trends and Developments in I.V. Delivery Systems  176  
Large-Volume Parenterals (LVPs) with Manufactured Additives (Premixes)  180  
Mini-Infuser Pumps for Intermittent I.V. Drug Delivery  182
Chapter 9  Blood Components and Plasma Expanders—Clyde Buchanan 190
Tissue Oxygenation ........................................ 190
Plasma Volume Expansion .............................. 194
Coagulation ................................................... 196

Chapter 10  Fundamentals of Fluid and Electrolyte Therapy—
Murray M. Tuckerman ........................................ 203
Measurement of Solute Concentration ............. 203
Osmolality and Calculation of Osmolarity ........ 208
Transport Across Biological Membranes ........... 211
Water Balance ............................................. 212
Sodium Balance .......................................... 217
Potassium Balance ......................................... 218
Calcium Balance .......................................... 220
Phosphorus Balance ....................................... 222
Magnesium Balance ....................................... 222
Bicarbonate Balance ....................................... 223
Anion Balance ............................................. 227

Chapter 11  Parenteral Admixtures and Incompatibilities ........ 229
Admixtures .................................................. 229
Incompatibilities .......................................... 230
Handling and Disposal of Chemotherapeutic Agents for
Cancer .......................................................... 252
Admixture Programs ....................................... 252
Reconstitution of Sterile Solids ......................... 255

Chapter 12  Convenience Parenterals .............................. 263
Ampules ..................................................... 263
Vials ............................................................ 263
Prefilled Disposable Syringes ......................... 267

Chapter 13  Radiopharmaceuticals—Elaine D. Mackowiak .... 279
Use of Radiopharmaceuticals ......................... 280
Units of Radioactivity ...................................... 282
Preparation of Radiopharmaceuticals ............... 286
Quality Control ............................................ 290
Safety .......................................................... 292

Chapter 14  Devices .............................................. 295
Syringes ..................................................... 295
Cannulae ..................................................... 301
Final Filtering Devices .................................... 311

Chapter 15  Ophthalmic Preparations ............................ 319
Requirements .............................................. 319
Tonicity ....................................................... 319
Sterilization ................................................. 323
Preservation ................................................ 324
