Raven Press • New York
Contents

1 Introduction: Cancer Chemotherapy and the Medicinal Chemist
J. A. Montgomery

Membrane Transport

19 Methotrexate, Aminopterin, and 7-Hydroxymethotrexate: Recent Concepts on the Cellular Pharmacology of 4-Aminoantifolates
I. D. Goldman, L. H. Matherly, and G. Fabre

41 Inhibitors of Nucleoside Transport as Probes and Drugs

57 Development of Nitrosourea Nucleosides as Anticancer Agents

77 Concepts in New Folate Analog Design
F. M. Sirotnak

Enzyme Activity

89 Methotrexate Polyglutamates in Cultured Human Breast Cancer Cells
J. Jolivet and B. A. Chabner

97 Folylpolyglutamate Synthetase: Relation to Methotrexate Action and as a Target for New Drug Development
J. J. McGuire, E. Mini, P. Hsieh, and J. R. Bertino

Y.-C. Cheng and R. W. Brockman

119 Prodrugs: An Approach to Target-Directed Chemotherapy
Y. M. Rustum

129 Biochemical Considerations in the Design of Analogs of 5'-Deoxy-5'-Methylthioadenosine

143 Plasmin-Activated Prodrugs for Cancer Chemotherapy
P. L. Carl

157 Hypoxic Cells as Targets for Cancer Chemotherapy
S. Rockwell
CONTENTS

Gene Function

173  Induction of Tumor Cell Differentiation as a Therapeutic Approach  
     A. Bloch

181  DNA Crosslinking Agents  
     K. W. Kohn

189  Nucleic Acid Analogs with Targeted Delivery as Chemotherapeutic Agents  
     P. O. P. Ts'o, P. S. Miller, and J. J. Greene

207  Sequence and Topology: Specific Attack on DNA and Chromatin  
     S. T. Crooke, C. K. Mirabelli, C. H. Huang, S. Mong, and A. Wong

219  Activation of Macrophages by Liposomes Containing both Lymphokines  
     and Muramyl Dipeptide for the Treatment of Heterogeneous Metastases  
     I. J. Fidler

227  Rational Design of Anticancer Drugs: Here, Imminent, or Illusive?  
     G. H. Hitchings

239  Subject Index
