THE DANISH MINISTRY
OF ENVIRONMENTAL PROTECTION

MODIFIERS OF CARCINOGENESIS

PROCEEDINGS FROM THE SYMPOSIUM
IN
Copenhagen
September 22–23, 1983

Editors: Ib Knudsen
Holger Pedersen
Eivind B. Thorling

THE DANISH CANCER SOCIETY
CONTENTS

OPENING ADDRESS

1. Aims and scope of the conference. What shall we consider a modifier? E.B. Thorling

2. Metabolism of carcinogens, possibilities for modulation. F. Oesch
   Introduction
   Contribution of various enzymes to the control of the concentration of reactive metabolites derived from aromatic olefinic hydrocarbons
   Consequences of differences in these enzymes between animal species and between test systems for toxic effects
   Consequences of modulations of these enzymes for the control of mutagenic metabolites
   References

3. Co-carcinogenesis David B. Clayson
   Introduction
   Protocols
   Initiation-promotion studies
   Is the agent a complete carcinogen or a promoter
   Molecular mechanism of initiation
   Promoting action
   Co-administration of chemicals
   Conclusions
   References
4. The role of genotoxic carcinogens and of promoters in carcinogenesis and in human cancer causation
J.H. Weisburger and E.L. Wynder

Introduction
Mechanism of carcinogenesis
Tobacco
Chemistry of tobacco products
Promoters and enhancers in tobacco products
Alcohol as a cocarcinogen
Nutritional factors
Postulated genotoxic carcinogens
Promoting factors
Comments
References

5. An evaluation of assay procedures for detection of tumor promoters
A. Sivak
Introduction
Direct cell culture assays
Direct animal assays
Indirect assays
Discussion and recommendations
References

6. Tumor promotion - mechanisms and implication to risk estimation
Hiroshi Yamasaki
Introduction
Two-stage carcinogenesis
Mechanisms of action of tumor promoting phorbol esters
Short-term tests for tumor promoters
Threshold problem in tumor promotion
References
7. Multistage skin carcinogenesis: A useful model for the study of the chemoprevention of cancer

Thomas J. Slaga

Introduction
Tumor initiation
Tumor promotion
Inhibitors of carcinogenesis and their specificity
References

8. Modification of carcinogenesis by antioxidants and other compounds

Hiroyuki Tsuda, Shoji Fukushima, Katsumi Imaida, Takao Sakata and Nobuyuki Ito

Introduction
Effect of BHA, EQ and AAP on induction of neoplastic lesions in the liver and kidney initiated by N-ethyl-N-hydroxyethylnitrosamine (EHEN)
Inhibition of antioxidants on induction of γ-GT positive foci in the liver of rats
Promotion by antioxidants of the induction of urinary bladder carcinogenesis in rats
Discussion
References

Erich Hecker

Introduction
Co-carcinogenic diterpene esters as principal risk factors in local life style esophageal cancer in Curacao
Current problems of terminology and assessment of cancer risk in multifactorial carcinogenesis
Appendix: A comprehensive, current concept of the etiology of environmental cancer and of carcinogenesis with proposals for concise and stringent system of terminology
References
REGULATORY ASPECTS OF MODIFIERS IN CARCINOGENESIS

10. Regulatory aspects of modifiers in carcinogenesis: An introduction 165
    Tore Sanner

11. Dietary modifiers: Occurrence of modifiers in food and drink and consequences for implementation of regulatory procedures 171
    Ib Knudsen
    Scientific approaches and societal perceptions 172
    References 178

12. General environmental modifiers of carcinogenesis 181
    Claes Ramel
    Introduction 182
    Initiation and promotion 182
    Sequence of events in mutagenesis 183
    Interaction and modification of metabolism 184
    Radical formation 188
    Interactions and modifications of DNA repair 190
    Practical aspects of cancer modification 192
    References 194
