MODERN APPROACHES TO VACCINES

Molecular and Chemical Basis of Virus Virulence and Immunogenicity

Edited by

Robert M. Chanock
National Institutes of Health

Richard A. Lerner
Research Institute of Scripps Clinic

Cold Spring Harbor Laboratory
1984
### Contents

- Conference Participants, v
- Preface, xxi
- A Tribute to Wallace Rowe, Robert Huebner, and Albert Sabin, xxiii

## Section 1  VIRUS STRUCTURE AND FUNCTION

</table>
Organization and Expression of Human Respiratory Syncytial Virus
Sundararajan Venkatesan, Narayanasamy Elango, Masanobu Satake, Ena Camargo, and Robert M. Chanock

Use of Genetic Recombination for Constructing Novel Strains of a Picornavirus
David McCahon, Andrew M.Q. King, Keith Saunders, William R. Slade, and John W.I. Newman

Analysis of Cloned Genes Encoding Rotaviral Type-specific Neutralizing Antigens

Approaches to the Development of Hepatitis-A Vaccines: The Old and the New
Robert H. Purcell, Stephen M. Feinstone, Richard J. Daemer, John R. Ticehurst, and Bahige M. Baroudy

Section 2 CHEMISTRY OF VIRUS NEUTRALIZATION
Identification of Multiple Neutralization Antigenic Sites on Poliovirus Type 1 and the Priming of the Immune Response with Synthetic Peptides
Emilio A. Emini, Bradford A. Jameson, and Eckard Wimmer

Molecular Basis of Antivirus Serotype Specificity

Synthetic Approaches to Vaccination against Cholera Toxin
Michael Sela, Chaim O. Jacob, and Ruth Arnon

Chemical Basis for Variation in the Major Antigenic Site Eliciting Neutralizing Antibodies in Foot-and-Mouth Disease Virus

Immunization against Foot-and-Mouth Disease with a Chemically Synthesized Peptide

Anti-influenza Synthetic Vaccine
Ruth Arnon and Michal Shapira
Immunogenic and Antigenic Activities of a Cyclic Synthetic HBsAg Peptide
Gordon R. Dreesman, James T. Sparrow, Ronald C. Kennedy, and Joseph L. Melnick 115

Recombinant DNA and Synthetic Peptide Approaches to HBV Vaccine Development: Immunogenicity and Protective Efficacy in Chimpanzees
John L. Gerin, Robert H. Purcell, and Richard A. Lerner 121

Immunogenicity of the Unconjugated Synthetic Polypeptides of Hepatitis-B Surface Antigen
J. Wai-Kuo Shih, Robert J. Gerety, D. Teh-Yung Liu, Haruaki Yajima, Nobutaka Fujii, Motoyoshi Nomizu, Yoshio Hayashi, and Shinichi Katakura 127

A General Method to Prepare Synthetic Peptide Conjugates
J. M. Robert Parker, Smita Bhargava, and Robert S. Hodges 133

Localization of the Immunodominant Domains of Rabies Virus Glycoprotein
Roderick I. Macfarlan, Bernhard Dietzschold, Hilary Koprowski, Mary Kiel, Richard Houghten, Richard A. Lerner, and J. Gregor Sutcliffe 139

Synthesis of an Antigenic Determinant of the HSV gD That Stimulates the Induction of Virus-neutralizing Antibodies and Confers Protection against a Lethal Challenge of HSV
Bernhard Dietzschold, Angela Varrichio, Gary Cohen, and Roselyn Eisenberg 145

Structures in Influenza A/USSR/90/77 Hemagglutinin Associated with Epidemiologic and Antigenic Changes
Alan P. Kendal, Nancy J. Cox, Setsuko Nakajima, Katsuhisa Nakajima, Lucy Raymond, Andy Caton, George Brownlee, and Robert G. Webster 151

Section 3  CLONING AND EXPRESSION OF VIRAL GENES

Molecular Cloning of Rotaviral Genes: Implications for Immunoprophylaxis
Jorge Flores, Mitzi Sereno, Anthony Kalica, Jerry Keith, Albert Kapikian, and Robert M. Chanock 159

Characterization of Influenza Virus Glycoproteins Expressed from Cloned cDNAs in Prokaryotic and Eukaryotic Cells
Debi P. Nayak, Alan R. Davis, Masahiro Ueda, Timothy J. Bos, and Natarajan Sivasubramanian 165

Expression in Escherichia coli of Capsid Protein VP1 of Poliovirus Type 1
Betty E. Enger-Valk, Jan Jore, Peter H. Pouwels, Pieter van der Marel, and Toon L. van Wezel 173
A Direct Cloning-Expression System for Neutralization Antigens of Herpes Simplex Viruses
Wai-Choi Leung, GuoZhong Jing, Seyed E. Hasnain, ShouChing Tang, and Maria Leung

High-level Production in *Escherichia coli* of Hybrid Proteins Expressing Parts of the Coding Sequences of HSV Glycoproteins
Egon Amann, Michael Bröker, and Florian Wurm

Production of an HSV Subunit Vaccine by Genetically Engineered Mammalian Cell Lines
Laurence A. Lasky, Donald Dowbenko, Christian Simonsen, and Phillip W. Berman

Expression of Feline Panleukopenia Virus Antigens in *Escherichia coli*
Jonathan Carlson, Ian Maxwell, Francoise Maxwell, Alistair McNab, Keith Rushlow, Mike Mildbrand, Yosh Teramoto, and Scott Winston

The Rabies Glycoprotein Gene Is Expressed in *Escherichia coli* as a Denatured Polypeptide
Lawrence T. Malek, Gisela Soostmeyer, Robert T. Garvin, and Eric James

Hepatitis-B Vaccine: Characterization of Hepatitis-B Antigen Particles Produced in Yeast
Pablo Valenzuela, Patricia Tekamp-Olson, Doris Coit, Ulrike Heberlein, George Kuo, Frank R. Masiarz, Maria A. Medina-Selby, Steven Rosenberg, Joanne Whitney, Al Burlingame, and William J. Rutter

Genetically Engineered Vaccine against Avian Infectious Bronchitis Virus with the Advantages of Current Live and Killed Vaccines
David Cavanagh, Matthew M. Binns, Michael E.G. Boursnell, and T. David K. Brown

Cloning and Expression of the Surface Glycoprotein gp195 of Porcine Transmissible Gastroenteritis Virus
Sylvia Hu, Joan Bruszewski, Thomas Boone, and Larry Souza

In Vitro Genetic Constructions Devised to Express Given Antigenic Determinants at the Surface of Gram-negative Bacteria
Bernadette Bouges-Bocquet, Jean-Luc Guesdon, Christian Marchal, and Maurice Hofnung

Synthesis and Secretion of Hepatitis-B Surface Antigen Particles in Transfected Animal Cells
Marie-Louise Michel, Eliane Sobzack, Didier Lamy, and Pierre Tiollais

Expression of Hepatitis-B Surface Antigen in Eukaryotic Cells Using Viral Vectors
Christian Stratowa, Johannes Doehmer, Yuan Wang, and Peter H. Hofschneider

Production of Hepatitis-B Recombinant Vaccines
W. Neal Burnette, Babru Samal, Jeffrey K. Browne, Dennis Fenton, and Grant A. Bitter
Hepatitis-B Vaccine Purification by Immunoaffinity Chromatography
D. Eugene Wampler, Eugene B. Buynak, B. Jeffrey Harder, Alan C. Herman, Maurice R. Hilleman, William J. McAleer, and Edward M. Scolnick 251

Antigenic Determinants in the Poliovirus Capsid Protein VP1
Marie Chow, James L. Bittle, James Hogle, and David Baltimore 257

Comparison of Different Eukaryotic Vectors for the Expression of the Hemagglutinin Glycoprotein of Influenza Virus
Mary-Jane Gething, Joseph F. Sambrook, Thomas J. Braciale, and Colin M. Brand 263

Section 4  ATTENUATION OF VIRULENCE

Immunization Strategy: Infection-permissive Vaccines for the Modulation of Infection
Edwin D. Kilbourne 269

Bioengineering of Herpes Simplex Virus Variants for Potential Use as Live Vaccines
Bernard Roizman, Bernard Meignier, Bodil Norrild, and Joseph L. Wagner 275

Reoviral Hemagglutinin: Specific Attenuation and Antigenic Mimicry as Approaches for Immunization
Bernard N. Fields, Arlene H. Sharpe, Dale R. Spriggs, and Mark I. Greene 283

Immunogenic and Protective Power of Avirulent Mutants of Rabies Virus Selected with Neutralizing Monoclonal Antibodies
Anne Flamand, Patrice Coulon, Michel Pepin, Jean Blancou, Pierre Rollin, and Denis Portnoi 289

Construction of Live Recombinant Vaccines Using Genetically Engineered Poxviruses
Enzo Paoletti, Dennis Panicali, Bernard R. Lipinskas, Susan Mercer, Marilyn Wright, and Carol Samsonoff 295

A General Method for the Production and Selection of Vaccinia Virus Recombinants Expressing Foreign Genes
Michael Mackett, Geoffrey L. Smith, and Bernard Moss 301

Vaccination with Live Attenuated Human Cytomegalovirus
Stanley A. Plotkin 307

Vaccinia Virus Recombinants Expressing Genes from Pathogenic Agents Have Potential as Live Vaccines
Geoffrey L. Smith, Michael Mackett, Brian R. Murphy, and Bernard Moss 313

Use of Reassortant Rotaviruses and Monoclonal Antibodies to Make Gene-coding Assignments and Construct Rotavirus Vaccine Candidates
Harry Greenberg, Karen Midthun, Richard Wyatt, Jorge Flores, Yasutaka Hoshino, Robert M. Chanock, and Albert Kapikian 319
Attenuation of Wild-type Influenza-A Viruses for Man by Genetic Reassortment with Attenuated Donor Viruses
Brian R. Murphy, Alicia J. Buckler-White, Shu-fang Tian, Robert M. Chanock, Mary Lou Clements, Hunein F. Maassab, and William T. London 329

Engineering the Genome of Influenza Viruses for Immunoprophylaxis: Progress and Obstacles
Ching-Juh Lai, Lewis J. Markoff, Bor-Chian Lin, and Robert M. Chanock 339

Alterations in Pathogenicity of Influenza Virus through Reassortment
Rudolf Rott, Christoph Scholttissek, and Hans-Dieter Klenk 345

Evolution of the Oral Polio Vaccine Strains in Humans Occurs by Both Mutation and Intramolecular Recombination
Olen M. Kew and Baldev K. Nottay 357

Section 5 ENHANCEMENT OF ANTIGENICITY AND IMMUNOGENICITY

ISCOM, A Cagelike Immunostimulating Complex of Membrane Proteins
Bror Morein, Bo Sundquist, Stefan Höglund, Kristian Dalsgaard, and Albert Osterhaus 363

Use of Palmitic Acid as a Carrier for Chemically Synthesized Vaccines
Thomas P. Hopp 369

Rabies Immunosomes: Candidate for an RNA-free Vaccine
Lise Thibodeau, Pierre Perrin, and Pierre Sureau 373

Use of MHC Molecules to Augment Immunogenicity: Widely Applicable MHC1 Purification Technology and More Evidence for Superior Carrier Function
Arnold R. Sanderson 379

Development of Hepatitis-B Polypeptide Micelle Vaccines
Colin R. Howard, Paul R. Young, Kwesi N. Tsiquaye, and Arie J. Zuckerman 385

Characterization of a Hapten-carrier Conjugate Vaccine: H. influenzae—Diphtheria Conjugate Vaccine
Lance K. Gordon 393

Of Antigens, Adjuvants, and Carriers in Synthetic Vaccines
Françoise Audibert and Louis Chedid 397

Inhibition of NCMC by Influenza Hemagglutinin-specific Monoclonal Antibody
Rosemonde Mandeville, Dominic M. Justewicz, and Jacqueline Lecomte 401
Inhibition of Transformation in a Cell Line Infected with a ts Mutant of Mo-MSV by Cytoplasmic Microinjection of Purified IgG from an Antiserum Generated against a Synthetic v-mos Peptide
Gary E. Gallick, David B. Brown, Edwin C. Murphy, Jr., and Ralph B. Arlinghaus

Immunodominant Region of EDP208 Pili: Antigen-Antibody Interaction

High-performance Liquid Chromatography of Viral Proteins as a Tool in the Design of Synthetic Vaccines
Gjalt W. Welling, Gerda Groen, Tineke Popken-Boer, Janine Nijmeijer, Ruurd van der Zee, Jan B. Wilterdink, and Sytske Welling-Wester

Enhancement of the Immune Response to a Cyclic Synthetic HBsAg Peptide by Prior Injection of Anti-idiotype Antibodies
Ronald C. Kennedy, James T. Sparrow, Yanuario Sanchez, Joseph L. Melnick, and Gordon R. Dreesman

Immunogenicity of Subunits from Influenza and Rubella Viruses
Michel Trudel, Pierre Payment, Lise Thibodeau, Armand Boudreault, and Shirley Gillam
