Interaction of Steroid Hormone Receptors with DNA

Edited by M. Sluyser
Contents

Editor's introduction (M. Sluyser) ............................................ 6
1. Intracellular localisation of steroid receptors .......................... 7
   (C.R. Clark)
2. The role of the steroid molecule in hormonal action ............... 57
   (M. Sluyser)
3. Models for steroid–receptor interactions derived from X-ray crystallographic investigations ..................... 83
   (W.L. Duax, J.F. Griffin and C.M. Weeks)
4. Binding of the oestrogen receptor to non-specific DNA .......... 107
   (P.P. Baskevitch and H. Rochefort)
5. Structure of the chick oviduct progesterone receptor ............. 126
   (J. Mester, J-M. Renoir, T. Buchou, I. Joab, C. Radanyi, and
   E-E. Baulieu)
6. Glucocorticoid receptor structure and function .................... 155
   (S. Okret, J. Carlstedt-Duke, A-C. Wikström, M. Radojcic,
   and J-Å. Gustafsson)
7. Cellular dynamics and control of androgen receptor activity .... 190
   (S. Liao and C. Chang)
8. Interaction of androgen receptors with nuclear chromatin ........ 202
   (E. Mulder and A.O. Brinkmann)
9. The control of temporal and sequential puffing of polytene chromosomes of larval Drosophila melanogaster salivary glands by ecdysteroid hormone ......................... 226
   (O. Pongs)
